BARGAINING INEQUALITY: EMPLOYEE GOLDEN HANDCUFFS AND ASYMMETRIC INFORMATION

ANAT ALON-BECK*

Inaccurate unicorn firm valuation is a well-documented problem in finance literature. Employees of these large, privately held companies do not have access to fair market valuation or financial statements and, in many cases, are denied access to such reports, even when requested. Unicorn employees are granted equity as a substantial part of their compensation. However, due to the inferior position of employees in comparison to the start-up founders and other investors, information shedding light on the value of employee equity grants has been withheld, as apparent in recent practices.

Start-up founders, investors, and their lawyers have systematically abused equity award information asymmetry to their benefit. This Article sheds light on the latest practice that compels employees, who are not yet stockholders, to waive their stockholder inspection rights under Delaware General Corporation Law (“DGCL”) Section 220 as a condition to receiving stock options from the company. Perhaps the clearest indication of this new practice is the recent amendment to the National Venture Capital Association legal forms, which is intended to standardize a contractual “waiver of statutory inspection rights.” This waiver is designed to contract around stockholder inspection rights.

This Article puts forward competing arguments and policy considerations for and against such a waiver. It fills the gap in the case law

INTRODUCTION

Investors, founders and the law firms they work with systematically & ruthlessly exploit startup equity information asymmetry to their gain and employees' pain.

- Chris Zaharias¹

Have you ever wondered about the value of the options and shares that start-ups issue to employees? If you ask the start-up CEO, she tells you they are winning lottery tickets. If you ask your grandmother, she tells you they are worthless.

- Will Gornall & Ilya Strebulaev²

Information is power.³ Investment in private markets is risky and plagued with information asymmetry. Information asymmetry arises in situations where one party in a transaction has more information regarding the subject of the transaction than the other.⁴ Private companies operate in the dark. Information asymmetry creates entrepreneurial opportunities for such firms because they are not required to disclose information to the public regarding their financials, fair market value, or strategy. Information asymmetry can also generate a market failure if not managed properly by the firm.⁵

This Article questions the basic allocation of power between boards and stakeholders, including rank-and-file employees, under U.S. corporate law.⁶ Employees of venture-backed start-ups can become shareholders in the firms that they work for because they are offered equity as part of their compensation. The high-tech industry predominantly relies on the practice

of awarding options to rank-and-file employees.⁷ These options commonly require a large out-of-pocket investment on the part of employees to convert to stock.⁸ After the employees exercise their options, they become minority common shareholders.⁹

A shareholder can enjoy several rights associated with ownership, including returns, control over how the business operates (voting and inspection), risk of loss (distribution), duration (terminate or transfer) and the right to sue. But these rights are not absolute. Boards, managers, and employees will typically bargain over these rights in private agreements. The parties' ability to bargain is subject to several constraints, including state laws, government regulation, information asymmetry, conflict of interest, and the incomplete nature of contracts.¹⁰

This Article sheds light on a new practice designed to limit employees' rights as investors and keep them in the dark.¹¹ Stock option agreements now contain a new contractual waiver of stockholder inspection rights that prevents employees from accessing information about the value of their stock. This is the latest development in an ongoing trend to deprive tech employees of information about their investment in the firm that they work for. It all started when the social-networking company Facebook, now Meta, violated U.S. securities laws when it passed the 500 shareholders of record threshold at the end of 2011.¹² Facebook successfully lobbied Capitol Hill and Congress to increase the number of shareholders of record and to exclude employees. Prior to the Jumpstart Our Business Startups ("JOBS") Act, employees were protected as investors by U.S. securities laws. Start-ups were required to count employees as shareholders and provide them with

11. See *infra* Part IV.

12. Facebook did not want to trigger the old "500 shareholder rule." Prior to the JOBS Act, there was a rule, called the 500 shareholder rule. Under that rule, a company had to file a registration statement if it had more than \$10 million in assets and a class of equity securities with 500 or more shareholders. Filing such a statement meant that the company would effectively become a public company, due to all the reporting obligations under SEC rules. See Alon-Beck, *supra* note 7, at 186; see also Paul Sloan, *Three Reasons Facebook Has to Go Public*, CNET (Jan. 31, 2012, 7:07 AM), <https://www.cnet.com/tech/services-and-software/three-reasons-facebook-has-to-go-public/>; John C. Coffee, Jr., Professor, Colum. Univ. L. disclosures on material information. A trend that started with U.S. securities laws is now creeping into state corporate laws.

Lobbyists convinced regulators that company employees are insiders who do not need protections of mandatory disclosure. This Article rejects that view. Employees in large firms need protection. While employees of a small start-up may be privy to information about their firm, rank-and-file employees of large private firms are not well-positioned to monitor their company's progress.¹³ The economic incentives of employees of large firms are not aligned with those of the founders or managers. They are not protected by the bargaining ability of other sophisticated investors, such as Venture Capital ("VC") investors. Sophisticated investors are usually represented and can bargain for the ability to access information.

Inaccurate unicorn firm valuation due to of inflated post-money valuations is extremely severe and well-documented in finance literature.¹⁴ This problem is well-documented in the finance literature.¹⁵ Employees, unsophisticated investors, and the press might simply apply the latest series' share price to determine the valuation of the firm but this practice is simply not accurate. As noted by Gornell and Strabulaev:

The people most affected are employees with stock options. Many don't understand that these options are disconnected from headline-grabbing post-money valuations and that their value falls as investors come on board with preferential deals. This further complicates employees' decisions about how long to stick around to realize their options—especially considering that the longer they stay, the longer they take a hit on the salary they could earn elsewhere, where part of their compensation wouldn't be tied up in stock.¹⁶

13. *See infra* Part II.

14. A "unicorn" firm has the following features for the purposes of this Article: young but large, privately owned but "quasi-public," invests in research and development ("R&D") with intangible assets, VC-backed with concentrated ownership and controlling shareholders, and valued at over \$1 billion. The term "unicorn" was coined in 2013 by Aileen Lee. *See* Jennifer S. Fan, *Regulating Unicorns: Disclosure and the New Private Economy*, 57 B.C. L. REV. 583, 586 (2016); Abraham J.B. Cable, *Fool's Gold? Equity Compensation & the Mature Startup*, 11 VA. L. & BUS. REV. 613, 615 (2017).

15. Post-money valuation means a company's estimated worth after outside financing is added to its balance sheet. It is the market value given to a start-up firm after a round of financing. *See* William Gornall & Ilya Strebulaev, *Squaring Venture Capital Valuations with Reality* 4 (Nat'l Bureau of Econ. Rsch., Working Paper No. 23895, 2017). Gornall and Strebulaev's research indicates that over 90% of mutual funds used inflated post-money valuations. *Id.*

16. Ilya Strebulaev, *'Unicorn' Price Tags Aren't All They're Cracked Up To Be*, TECHCRUNCH (Apr. 10, 2018, 4:00 PM), <https://techcrunch.com/2018/04/10/unicorn-price-tags-arent-all-theyre-cracked-up-to-be/>.

Unicorn employees cannot value their equity grants because they do not have access to fair market valuation or financial statements and, in many cases, are denied access to such reports even if they ask for them. Start-up founders, investors, and their lawyers systematically abuse equity award information asymmetry to their benefit. This Article sheds light on the latest practice that compels employees, who are not yet stockholders, to waive their stockholder inspection rights under Delaware General Corporation Law (“DGCL”) Section 220 as a condition to receiving stock options from the company.¹⁷ This practice was recently codified by the National Venture Capital Association (“NVCA”).¹⁸ The recent amendment to NVCA legal forms is intended to standardize the contractual “waiver of statutory inspection rights.”¹⁹ The waiver is designed to contract around DGCL Section 220 stockholder inspection rights.

Delaware law is clear that stockholders’ inspection rights are not without limits. It is less clear to what extent they may be contractually limited and, more importantly, whether employees, as future minority stockholders, can contract away their information rights entirely.²⁰ DGCL Section 220 was designed to protect stockholders that require information to value their stock holdings, especially in the context of a private corporation that has no access to a liquid market. I argue that *ex ante* efforts to limit employee stockholder inspection rights via private ordering do not fit within the goals of corporate law.

There has been a rise in the number of inspection requests under Section 220.²¹ In recent years, the Delaware courts have encouraged shareholders to seek inspection of books and records prior to filing a lawsuit. As more shareholders have followed the courts’ encouragement, there has been an associated rise in the volume of books and records litigation.²² One of the recognized proper purposes is a shareholder’s desire to value its stock.

22. Roger A. Cooper et al., *The Rise of Books and Records Demands Under Section 220 of the DGCL*, HARV. L. SCH. F. ON CORP. GOVERNANCE (Apr. 12, 2019), <https://corpgov.law.harvard.edu/2019/04/12/the-rise-of-books-and-records-demands-under-section-220-of-the-dgcl/>.

Therefore, employees as shareholders can use a Section 220 request to value their stock. If companies want to avoid this type of demand, they need to provide information to their employees, as they used to not too long ago.²³ Under common law, shareholders were given access to information to protect their property interest in their investment in the firm. Most states in the United States, including Delaware, have codified common law inspection rights, with variations from state to state.²⁴

Inspection rights are one of the few “immutable” mandatory rules of corporate law.²⁵ In Delaware, stockholder inspection rights cannot be eliminated or limited by a provision in a corporation’s certificate of incorporation or bylaws.²⁶ However, there is ambiguity in the case law regarding the ability to eliminate this right via contract. Unicorn employees are now regularly coerced to waive this inspection right by entering into a contract with the corporation in the form of a stock option agreement. Their employers, who are unicorn fiduciaries, receive the benefit of operating without oversight from minority common stockholders—their employees.

The Delaware Court of Chancery has yet to answer the question of whether an employee can waive their rights to inspect books and records

26. State *ex rel.* Cochran v. Penn-Beaver Oil Co., 143 A. 257, 260 (Del. 1926) (holding that a charter provision that “permits the directors to deny any examination of the company”’s records by a stockholder is unauthorized and ineffective”); Rainbow Navigation, Inc. v. Pan Ocean Navigation, Inc., 535 A.2d 1357, 1359 (Del. 1987) (stating the shareholders’ right of inspection “can only be taken away by statutory enactment”); BBC Acquisition Corp. v. Durr-Fillauer Med., Inc., 623 A.2d 85, 90 (Del. Ch. 1992) (stating a shareholder’s inspection rights “cannot be abridged or abrogated by an act of the corporation”); see also Geeyoung Min, *Shareholder Voice in Corporate Charter Amendments*, 43 J. CORP. L. 289, 294 (2018).

under Section 220 by signing an option agreement that contains such a waiver. This practice is new, and, in many cases, the employees are putting forth the argument that they signed the waiver without any knowledge.²⁷ There are even fraud allegations whereby employees had no idea that they were signing on new language that is not “normal” for the stock option-type deals that tech companies in Silicon Valley have used for decades.²⁸ Many employees further complain that they were intentionally misled into signing or were not provided copies of the agreements prior to signing.²⁹

This Article tracks this new development and presents the following questions: Can statutory stockholder inspection rights be waived? Should Delaware Courts enforce these contractual limits on stockholder rights? Should Delaware Courts extend this protection to certain stakeholders? This issue surrounding stock option awards is garnering intense debate and attention in Silicon Valley, especially because of the rise in disputes between VC-backed unicorns and their employees.³⁰

To illustrate this predicament, this Article will introduce the *Biederman v. Domo, Inc.*³¹ and *JUUL Labs, Inc. v. Grove*³² cases. This new waiver practice became popular following the *Domo* case and its extensive media coverage. Relying on a hand-collected data set consisting of the SEC’s public filings, which included tech companies that had filed an Initial Public Offering (“IPO”) prior to and following *Domo*, I found that many firms began requiring that their employees sign a waiver clause titled “Waiver of Statutory Information Rights”³³ following *Domo*. I also discovered that the NVCA recently updated its set of model legal documents to incorporate this waiver clause.³⁴ Accordingly, many law firms have since updated their clients’ stock option restriction agreement templates to include this waiver provision.³⁵ *Domo* was the first case where an employee tried to use Section 220. *Juul* came after, and in *Juul* we found out on the new practice of waiver of Section 220 inspection rights.

It is not clear whether a stockholder waiver of statutory rights would be enforceable by a court, such as in Delaware. This Article puts forward the competing arguments and policy considerations for and against enforcing a stockholder inspection rights waiver.³⁶ It fills the gap in the case law and evaluates whether a contract between the company and its employees, which operates independently and outside the charter or bylaws, can modify or eliminate the mandatory inspection rights expressly set forth in the DGCL. The Delaware Court of Chancery will have to answer this question soon. The resolution on this issue will have tremendous influence on corporate law, litigation, and practice. This Article also proposes an amendment to the DGCL, which would expand the statutory inspection rights under Section 220 to specifically include stock option holders.

This Article proceeds as follows. Part I examines the asymmetry of information between the two major groups of investors in unicorns, the practical effects of it, and the attempts by employees to address it. Part II introduces the role of stockholder inspection rights in corporate law and sheds light on a new practice requiring unicorn employees to sign a waiver clause titled “Waiver of Statutory Information Rights.” Part III presents some empirical findings, which reveal that approximately eighty-seven percent of the unicorn firms in the United States choose to incorporate in Delaware. Part IV calls for the Delaware courts and legislature to provide protection for minority stockholders against oppression and mismanagement by the majority stockholders. It also explores amending the DGCL to expand statutory inspection rights under Section 220 to include stock option holders. This Article concludes by suggesting reforms that could improve governance in unicorn firms.

I. THE ASYMMETRIC WORLD

Equity compensation makes up more than a quarter (27%) of employees’ net worth, on average—and more for Millennials than any other group (41%, versus 21% for Gen X and 20% for Boomers)

Any investor that allocates financial or human capital in private markets deals with information asymmetry. The recent changes to U.S. securities laws were enacted on the theory that company employees are likely to have intimate knowledge of the business and therefore do not need the protections of mandatory disclosure. But that is not likely to be true of the enormous private companies that exist today.

A. All Shareholders Are Not Made Equal

This Article focuses on the information asymmetry between the various groups of investors in unicorn firms: top management (including founders), outside capital, and inside capital that is human capital (rank-and-file employees). Employees fulfill unique roles within tech firms as assets and investors at the same time.

This dynamic was achieved through contractual innovation. The employee stock option agreement is an example of an extremely popular and prevalent practice among growth companies.³⁸ Most high-tech start-ups, including Google, Intel, and Microsoft, used this type of contract to provide equity compensation to their employees, which in return helped build their companies.³⁹ The stock option agreement allows employees to cross over from stakeholder status to shareholder. Tech employees are not only working for the firm, but also invest a large part of their equity in it, as stockholders and stock option holders.⁴⁰

In the United States, tech founders have a long history of splitting the pie with two types of investors: employees and outside investors.⁴¹ The main differences between these two types of investors are diversification and negotiating power.⁴² Outside investors are usually diversified. They provide capital to the firm in return for equity, but also put their eggs in other baskets by investing in other firms. Employees, on the other hand, put all of their

eggs in one basket—the firm’s basket. They are not only employed by the firm but are invested in it. Investors get diversification of risk while employees do not. To sum up, investors put money into the business and get shares of stock to earn a profit. Employees also invest in the company but exchange their creativity and hard work for the sweat equity needed to create the game-changing innovations necessary for American competitiveness in the global marketplace.⁴³

The second major difference is negotiating power. There are times where employees as investors in the firm may need to make an investment decision, but may not be able to make an informed one.⁴⁴ Exercising options is an investment decision because it requires employees to pay the option exercise price and, in most cases, to pay high income tax on paper profits that may never materialize.⁴⁵ This Article is about privately-held firms, which means that investors, including employees, cannot simply sell their shares on an exchange and generally have restrictions on transfer or sale. There are new secondary markets, but they are not always available, reliable, or efficient.⁴⁶

Unicorn employees may be rich on paper, but they need money to exercise their options.⁴⁷ They may have to borrow money from outside sources to keep their shares. They do not have the ability to finance their investments by using their options as collateral. If they cannot get financing or decide not to take the risk, they will have to forfeit the right to equity that may become quite valuable down the road if the company goes public. Many employees simply cannot afford to take this risk. According to a 2019 Charles Schwab survey, more than half of start-up employees never exercise or sell the pre-IPO stock options they have earned.⁴⁸

There are several scenarios where employees will be confronted with this investment decision. They may consider the prospect of leaving their jobs, but their options would expire or their stock would be subject to a mandatory resale.⁴⁹ If they received options and worked for the firm for over

49. See Alon-Beck, *supra* note 7, at 142–43 (discussing the example of employees at Good Technology). Good’s share value plunged after the company was acquired, but the employee-investors still had paid cumbersome tax bills for profits that never really materialized. Katie Benner,

ten years, according to U.S. tax laws, employees may need to decide to exercise their options or dispose of their shares.⁵⁰ Some may consider selling their stock (or options) into secondary markets, provided that they are able to do so.⁵¹ Others may find that their options are prohibitively expensive or risky to exercise due to high pre-IPO unicorn valuations, liquidity constraints, or other tax concerns.⁵²

Regardless of the decisions they have to make, in nearly every case, employees have “little to no negotiating power to obtain . . . information” about their investment.⁵³ Without access to information, they cannot accurately value their holdings and may not understand that the value of their options is likely to diminish if certain types of nontraditional investor groups join the firm in later rounds due to special preferred terms and conditions.⁵⁴

B. The Practical Effects of Asymmetry

There is information asymmetry between the various types of investors in unicorn firms—founders, top management, outside capital and employees—which can lead to market failure if not directed properly.⁵⁵ The

When a Unicorn Start-Up Stumbles, Its Employees Get Hurt, N.Y. TIMES (Dec. 23, 2015), <https://www.nytimes.com/2015/12/27/technology/when-a-unicorn-start-up-stumbles-its-employees-get-hurt.html>.

50. According to the Internal Revenue Code, if there are outstanding employee stock options that are unexercised, they expire ten years from date of grant, and are absorbed back into the company’s equity pool. I.R.C. § 422(b)(3) (2018). Historically, tech companies did not have a problem because the incentive stock was designed at a time when tech companies aimed to go public as soon as they could to raise more capital. On how individuals anticipate others’ intentions, see Michael Spence, *Informational Aspects of Market Structure: An Introduction*, 90 Q.J. ECON. 591 (1976). On how individuals are incapable of evaluating the quality of services and market failure, see Joseph E. Stiglitz, *The Contributions of the Economics of Information to Twentieth Century Economics*, 115 Q. J. ECON. 1441, 1471 (2000);

bargaining power between founders (managers) and employee-investors is persistently unequal in the unicorn firm context.

The structural inequality in the bargaining power between the unicorn firm, as represented by the founders and managers, and its workers, is referred to in this Article as “bargaining inequality.” This bargaining inequality problem disrupts the process of allocating resources efficiently and the quality of services available on the market.⁵⁶ The conflict between the firm, top management, and employees results from new market dynamics and changes to traditional unicorn start-up governance arrangements.⁵⁷

Unicorn founders changed the traditional start-up funding model and governance structures of VC-backed firms. In the past, senior managers and employees both received common stock. Historically, VC-backed start-ups issued two classes of stock: common and preferred.⁵⁸ Now, Founders push to stay private longer and maintain control over the firm. They are able to do so where VC investment rounds are structured as founder “friendly” financing rounds.⁵⁹

Unicorn founders also have more leverage in their negotiations with VC investors on economic, liquidity, and voting rights.⁶⁰ Until recently, it was unimaginable that a VC-backed start-up could reach an aggressive valuation of more than \$1 billion without going public.⁶¹ But as of this Article’s publication, 1,118 companies⁶² are considered “unicorn” firms⁶³ simply because they are privately owned and valued at \$1 billion or more.⁶⁴ The

unicorn list keeps growing, and unicorns are no longer rare.⁶⁵ The pandemic has not at all dampened investor interest in these firms.⁶⁶ At the same time, unicorn firms continue to attract skepticism about their valuations.⁶⁷

Founder-friendly terms are found in the formation and financing documents.⁶⁸ The new structures are designed to give founders control over the company (in their capacity as shareholders), even if their ownership stake is diluted in the future, with additional rounds of financing. The new structures can have adverse effects on the board of director's fiduciary duty and can also subject the employees as investors to a holdup and abuse by the founders, but this discussion is outside the scope of this Article.⁶⁹

C. Employees Attempt to Seek Recourse in Shareholder Power

There are several economic theories purporting to explain what a firm is. In general, these theories have considered the employer-employee

relationship to be significant to the definition and purpose of the firm.⁷⁰ Despite this recognition, unfortunately, corporate governance scholarship neglected to pay attention to the role of employees as “human capital.”⁷¹ It mainly “focused on the relationship between directors, managers, and [outside] shareholders.”⁷² The time is ripe for corporate law to take employees, as stakeholders and shareholders, into account when defining the legal boundaries of the firm.

The recent developments that aim to keep tech employees in the dark are not surprising because our traditional corporate law holds the view that the legal relationships between labor, capital, and the firm are very different. While both labor (human capital) and capital (financial) contribute to and invest in the firm, only shareholders that belong to the financial capital group (or their agents) get to decide how the firm is to be governed.

But this is changing. There is a paradigm shift on the role of human capital, culture, and purpose in corporate governance. This shift is driven by various influential stakeholders, including activist investors, tech employees, the Global Reporting Initiative, the Embankment Project for Inclusive Capitalism, the Business Roundtable, the Sustainability Accounting Standards Board (“SASB”), and the U.S. Securities and Exchange Commission (“SEC”).⁷³

Delaware courts also changed their approach in the start-up firm context. They adopted a rule of “common maximization,” which means that the board of directors has to take the common stockholder interests into account and seek value for the common stockholders in the event of a sale.⁷⁴ In 2013, the Delaware Court of Chancery issued an opinion, *In re Trados Inc.*⁷⁵ The case involved a “fire sale,” which is a sale of a company’s

70. See Matthew T. Bodie, *Employees and the Boundaries of the Corporation*, in RESEARCH HANDBOOK ON THE ECONOMICS OF CORPORATE LAW (Claire A. Hill & Brett H. McDonnell eds., 2013); R.H. F. ON CORP. GOVERNANCE (May 24, 2020), <https://corpgov.law.harvard.edu/2020/05/24/human-capital-key-findings-from-a-survey-of-public-company-directors/>.

74. For more on this rule, see Abraham J.B. Cable, *Does Trados Matter?*, 45 *J. CORP. L.* 311 (2020).

75. See *In re Trados Inc. S’holder Litig.*, 73 A.3d 17 (Del. Ch. 2013). Several legal scholars analyzed the *Trados* decision. See Cable, *supra* note 74; Robert P. Bartlett, III, *Shareholder Wealth Maximization as Means to an End*, 38 *SEATTLE U. L. REV.* 255, 290–95 (2015) (criticizing the *Trados* court’s reasoning for failing to recognize the board as a venue for bargaining over the

securities at a price that is well below market value, generally because the company issuing them is in deep water financially. Historically, boards of directors of tech companies were controlled by VC investors. It was very common for fire sales to result in payouts only to the preferred shareholders (due to liquidation preferences), i.e., the venture capital funds. The directors who are common shareholders and hold senior management positions get bonuses. But the other common shareholders, such as employees, usually do not get anything from the sale. The *Trados* court recognized that the board of directors was conflicted when making the decision to sell and held that the board owes “its primary duty to common shareholders when the interests of preferred shareholders and common shareholders come into conflict.”⁷⁶

The *Trados* decision is very important because the court specifically recognized the fact that the Trados board failed to consider the effects of the transaction in question on common stockholders. Not only did the board fail to do so, but it made an informed decision that purposefully ignored the conflict of interest between the different parties involved.⁷⁷ Unfortunately, despite the fact that *Trados* appeared on numerous blogs and caught the attention of many lawyers, according to research by Abraham Cable, *Trados* has not had a substantial effect on venture capital financing terms.⁷⁸

In light of the other developments described above and the power struggles between the different stakeholders in large start-up firms, it is not surprising that the corporate practice has not changed significantly. However, it is my view that *Trados* is important in perhaps signaling how the Delaware court may treat cases that involve common shareholders in the future. One of the largest groups of common shareholders in a start-up are the employees.

Tech employees are different than employees in other industries. Tech employees are not merely stakeholders but are usually also equity holders (shareholders) in their firm, as I explain in my paper, *Unicorn Stock*

company’s future); William W. Bratton & Michael L. Wachter, *A Theory of Preferred Stock*, 161 U. PA. L. REV. 1815, 1874–900 (2013) (discussing *Trados* in articulating an over-arching “theory of preferred stock”); Charles R. Korsmo, *Venture Capital and Preferred Stock*, 78 BROOK. L. REV. 1163, 1165, 1185–89 (2013) (discussing *Trados* as a basis for “reassess[ing] the law’s treatment of preferred stockholders in the venture capital context”); Elizabeth Pollman, *Startup Governance*, 168 U. PA. L. REV. 155 (2019); Simone M. Sepe, *Intruders in the Boardroom: The Case of Constituency Directors*, 91 WASH. U. L. REV. 309, 316 n.26 (2013) (discussing *Trados* in an economic analysis of constituency directors); Leo E. Strine, Jr., *Poor Pitiful or Potently Powerful Preferred*, 161 U. PA. L. REV. 2025, 2039 (2013) (discussing *Trados* in a response to Bratton & Wachter, *supra*).

77. See *id.*; see also *In re Trados*, 73 A.3d at 62–65.

78. According to Cable, *Trados* “lawyers now advise boards to more systematically consider continuation value and, in some cases, push consideration to common shareholders in excess of their baseline entitlements.” See Cable, *supra* note 74, at 325.

Options.⁷⁹ Moreover, and more importantly, as noted by Gorga and Halberstam,⁸⁰ and later, by Yifat Aran,⁸¹ tech firms use equity compensation to avoid the high costs associated with employee turnover. Such an arrangement not only helps prevent employee turnover, but also makes it possible for employees to participate in the growth of the business and in sharing the risk.

As discussed in further detail below, only stockholders, not stock option holders, can make a demand on the company (board of directors) to inspect books and records to find out the value of their stock.⁸² Employees who wanted access to information became shareholders of record and, in their capacity as shareholders, started making demands on the companies that they work for. To deal with the rise in demands and the desire to not disclose material information about the firm, some start-ups adopted new contractual mechanisms to get around this. They require employees to waive their stockholder inspection rights under DGCL Section 220 as a condition to receiving stock options from the company.⁸³ This is despite the fact that inspection rights are especially important in the context of a private corporation, where stockholders do not have access to a liquid market.⁸⁴

This latest contractual innovation, however, which compels employee-stockholders to waive their inspection rights as a condition to receiving stock options from their company, is very significant.⁸⁵ Many tech firms, including unicorns, are taking advantage of this new disclosure arbitrage that was created by changes to U.S. securities laws, by adopting a new practice that contracts around stockholder inspection rights and compels employees to

79. See Alon-Beck, *supra* note 7.

80. See Érica Gorga & Michael Halberstam, *Knowledge Inputs, Legal Institutions and Firm Structure: Towards a Knowledge-Based Theory of the Firm*, 101 NW. U. L. REV. 1123, 1185, 1192 (2007).

81. Yifat Aran, Note, *Beyond Covenants Not to Compete: Equilibrium in High-Tech Startup Labor Markets*, 70 STAN. L. REV. 1235 (2018) [hereinafter Aran, *Beyond Covenants*]; Yifat Aran, *Making Disclosure Work for Start-Up Employees*, 2019 COLUM. BUS. L. REV. 867 (2019) [hereinafter Aran, *Making Disclosure Work for Start-Up Employees*].

82. See *infra* Part III.

83. There is analogy to be drawn between this issue and section 115 of the DGCL. In *Bonanno v. VTB Holdings Inc.*, the Delaware Court of Chancery drew an important distinction between forum selection clauses contained in a corporation's articles or bylaws, and those contained in external contracts such as a shareholders' agreement. C.A. No. 10681-VCN, 2016 WL 614412, at *14 (Del. Ch. Feb. 8, 2016). Obviously, the two issues are not identical, but based on *Bonanno*—does Delaware have “an overarching public policy” that prevents stockholders of Delaware corporations from waiving their stockholder inspection rights? *Id.* For comparison, see *Havlicek v. Coast-to-Coast Analytical Servs, Inc.*, 46 Cal. Rptr. 2d 696, 699 (Cal. Ct. App. 1995) (“California has a public policy favoring broad inspection rights for the directors.”).

84. See *infra* Part III.

85. See Shapira, *supra* note 17 at 1999; Geis, *supra* note 17, at 414.

waive their rights as stockholders under Delaware General Corporation Law (“DGCL”) Section 220.⁸⁶

This is accomplished through private ordering, whereby the firm requires the employees to waive the right *ex ante*, by entering into a separate contract with the employee. Enter the stock option agreement.⁸⁷ The employee signs the stock option agreement, which contains a waiver clause titled “Waiver of Statutory Information Rights.”⁸⁸ By signing this waiver, the employee relinquishes their stockholder rights to inspect the firm’s books and records under Section 220 of the DGCL, thus losing their last avenue of access to information.⁸⁹

Stockholder inspection rights are one of the most powerful fundamental rights in corporate law because they allow stockholders to inspect nonpublic company information. Inspection rights address the problem of information asymmetry, which is inherent in all companies, especially privately held start-up firms.⁹⁰ These rights were designed to allow a stockholder to gain access to nonpublic information so the stockholder can protect their economic interests, make informed decisions, and hold the company’s fiduciaries accountable by subjecting them to oversight, particularly in scenarios like *Trados*.⁹¹

Section 220 of the DGCL not only provides an important protection to a stockholder by allowing them to seek inspection of the books and records of a Delaware corporation to investigate potential wrongdoings but is also an important tool in litigation for pre-filing investigations. In recent years, we have seen a sharp increase in the general use of Section 220 by the plaintiff’s bar.⁹² This rise is partly attributed to Delaware courts’ decisions, such as *Corwin v. KKR Financial Holdings LLC*,⁹³ which raised the pleading standard for stockholder plaintiffs in stockholder derivative or post-merger damages suits.

86. Compare DEL. CODE ANN. tit. 8, § 220 (2006), with MODEL BUS. CORP. ACT §§ 16.02-16.03 (requiring corporations to provide shareholders with annual financial statements).

87. See *infra* Section IV.G on private ordering.

88. The employees waive their inspection rights of the following materials: company stock ledger, a list of its stockholders, other books and records, and the books and records of subsidiaries of the company. The waiver is in effect until the first sale of common stock of the company to the public. See *infra* note 215 and accompanying text.

89. See Shapira, *supra* note 17, at 1952; Geis, *supra* note 17, at 410.

90. See *infra* Part IV.

91. See *infra* Part III on stockholder inspection rights.

92. See Gornall & Strebulaev, *supra* note 15, at 2; see also Robert P. Bartlett, III, *A Founder’s Guide to Unicorn Creation: How Liquidation Preferences in M&A Transactions Affect Start-up Valuation*, in RESEARCH HANDBOOK ON MERGERS & ACQUISITIONS 123 (Claire A. Hill & Steven D. Solomon eds., 2016).

93. 125 A.3d 304 (Del. 2015).

Inspection rights under Section 220 can be an important tool for hundreds or thousands of tech workers around the country who received equity awards from unicorns (or other tech firms) in return for their sweat labor and are now questioning the worth of their shares.⁹⁴ Unicorn firms raise money at a billion dollar valuation but are not required to be audited by an independent auditor before issuing equity compensation to unaccredited or unsophisticated purchasers, namely, their employees.⁹⁵ The problem of inaccurate unicorn firm valuation is quite severe and greatly limits the ability of employees to understand the true value of their equity compensation.⁹⁶

With the rise in the number of unicorn firms in the United States, there is a need for greater certainty in the exercise of this inspection right. Unicorn employees do not have access to financial reports and, in many cases, are denied access to such reports even if they ask for them. Some start-up founders, investors, and their lawyers recently systematically abused equity award information asymmetry to their personal benefit. They were able to do so thanks to a change in U.S securities laws, one that limits the type of information employees receive as stockholders. Unicorn employees are left with no choice but to turn to the courts for help to gain access to such information.⁹⁷ As a result, the country may witness a wave of litigation concerning books and records demands by unicorn employees.⁹⁸

D. The Black Box of Unicorn Valuation

Unicorns are private start-up firms, which means they generally focus on fast scale and large growth and are unprofitable in their early years. The problem of inflated post-money valuations of unicorn firms is well-documented in the finance literature.⁹⁹ Unsophisticated investors or the press might simply apply the latest series' share price to all these investors to determine the valuation of the firm, but this practice is simply not accurate.¹⁰⁰

94. See *infra* Section I.D on unicorn valuation.

95. See *infra* Part III.

96. See *infra* Part II.

97. See *infra* Section III.B. The JOBS Act and subsequent legislation leave employees vulnerable (as investors in their companies) and subject them to the discretion of majority shareholders.

98. Corporate law is governed by state law and varies from state to state in the United States. Generally, Delaware courts are typically more management friendly, whereas New York and California courts protect shareholders.

99. Post-money valuation means a company's estimated worth after outside financing is added to its balance sheet. It is the market value given to a start-up firm after a round of financing. See Gornall & Strebulaev, *supra* note 4, at 4. Their research indicates that over ninety percent of mutual funds used inflated post-money valuations. *Id.*

100. Robin Hui Huang & Randall S. Thomas, *The Law and Practice of Shareholder Inspection Rights: A Comparative Analysis of China and the United States*, 53 VAND. J. TRANSNAT'L L. 907,

According to Gornall and Strebulaev, unicorns often report values that are on average about 51% to more than 200% above their fair market value. To help tech employees figure out the black box of their unicorn employer's valuation, Gornall and Strebulaev created a new online tool, allowing unicorn employees to properly value their stock.¹⁰¹ It should be noted, however, that Gornall and Strebulaev's tool only covers firms they were able to gather information on from various sources. This is a great initiative, but again, it does not fully solve the problem of lack of information about these companies.

Start-ups, including unicorns, typically sell shares to private investors to raise money. They often raise capital in multiple rounds. Each financing round is unique. Unicorns are different from traditional start-ups because they are able to stay private longer by raising large amounts of money from nontraditional investors (i.e., alternative venture capital).¹⁰² Therefore, unicorns have a complex capital structure. They sell shares to venture capitalists, institutional investors, hedge funds, mutual funds, corporate venture capitalists, sovereign wealth funds, Softbank, and other investors. Each of these investors usually negotiates different terms at each round of financing. Unicorns can have up to eight classes of stock, or perhaps even more.

Investors typically look at the latest round of financing to try to determine the exact market value (valuation) of the unicorn. They usually take the latest stock purchase price and apply that number to all the outstanding shares. For example, consider the unicorn, Square. At the last round of financing, Square was able to raise \$15.46 a share for its Series E shares.¹⁰³ After the financing round, Square was valued at \$6 billion using the following formula:

927 n.69 (2020) (citing *CM & M Grp., Inc. v. Carroll*, 453 A.2d 788, 792 (Del. 1982), for the proposition that Section 220 litigation may be validly brought by shareholders to determine the value of a company's shares); Chana R. Schoenberger, *Why Those Startup Valuations Might Be Way Off*, WALL ST. J. (Oct. 8, 2017, 10:04 PM), <https://www.wsj.com/articles/why-those-startup-valuations-might-be-way-off-1507514641>; Katia Savchuk, *How Much Is Your Slice of That Unicorn Really Worth?*, STAN. GRADUATE SCH. OF BUS. (May 5, 2022), <https://www.gsb.stanford.edu/insights/how-much-your-slice-unicorn-really-worth> ("For instance, Postmates, the on-demand delivery service, was worth \$1.7 billion as of its last financing round in January 2019, not the \$1.9 billion reported, according to Strebulaev's calculator. Airbnb had a fair value of \$27.6 billion during its last funding round in 2017, rather than the reported \$30 billion.").

101. See Gornall & Strebulaev, *supra* note 15.

102. See Alon-Beck, *supra* note 54, at 990–92.

103. Ari Levy, *What is Square—or Any Start-up—Really Worth?*, CNBC (Nov. 13, 2015, 1:25 PM), <https://www.cnbc.com/2015/11/13/square-what-its-really-worth.html>.

$\$15.46 \text{ Series E shares} \times \text{ALL outstanding shares and unissued options}$
 $= \$6 \text{ billion}^{104}$

Several problems exist with valuing a company this way, as Gornall and Strebulaev correctly illustrate.¹⁰⁵ This sort of valuation does not factor in the different contractual terms, such as liquidation preferences the various investors negotiated for, which were associated with the Series E stock. Additionally, the investors can negotiate for different economic rights, such as full ratchet or weighted average protections. Full ratchet and weighted average are examples of anti-dilution protections that sophisticated investors negotiate for in the event of liquidation or failure. These protect early investors by compensating them in the event of a future dilution in their ownership. Common and preferred stock do not typically receive the same protections, which means that common stockholders are likely to get far less for their shares.

If we were to use Gornall and Strebulaev's valuation model, which considers the different rights and protections of the various investors' groups, then a unicorn like Square would not be valued at \$6 billion but rather at only \$2.2 billion. Note that when Square did eventually go public, its pre-IPO valuation was set at \$2.66 billion.¹⁰⁶ Thus, Gornall and Strebulaev were spot on with their calculations of Square's valuation.

E. Bargaining Under Asymmetric Information

The issue of valuation and the ability to make informed investment decisions is critical for unicorn firm employees as minority shareholders. A central issue for unicorn employees, who are also stock option holders, is that they are uninformed about their rights, the *true* or *accurate* valuation of company stock, and the overall financial stability of the company. They might have access to public information to *some* valuation details, but that valuation is wildly inflated. To make an informed investment decision on whether to exercise or forfeit their options, they need disclosure and access to appropriate information.¹⁰⁷

104. See Gornall & Strebulaev, *supra* note 15, at 4. Post-money valuations treat all shares equally in this calculation, but they are not equal. Depending on the type and round of funding, the shares issued can potentially have different rights and protections. *Id.*

106. See *id.* at 18.

107. The U.S. Supreme Court made it clear in *Ralston Purina* that employee status, taken alone, does not guarantee access to material information. *SEC v. Ralston Purina Co.*, 346 U.S. 119, 126 (1953).

An investment in a unicorn firm is an investment in private equity markets, which are categorized by greater information asymmetries¹⁰⁸ when compared to public markets. Therefore, the variation in investment strategy among the various investors affects the stock price, which is difficult to ascertain if the investor-employees do not have information such as the list of shareholders and the various terms of the financing rounds.

This Article rejects the view that employees are simply insiders who already have financial information about the firm and its viability. Some scholars consider employees of start-ups insiders (sometimes they go so far as to consider these employees successful gamblers or lottery winners) who are well-positioned to monitor their company's progress.¹⁰⁹ Such scholars presume that the employees' economic incentives are aligned with those of the founders.¹¹⁰ Moreover, these scholars assume that the employees are protected by the bargaining ability of other sophisticated investors, such as VC investors, who can sanction the founders for bad behavior. Even if this is true in limited circumstances (perhaps this theory could work for employees of small or medium-sized start-ups), it certainly is not true for unicorn employees.¹¹¹

There is a conflict of interest between the founders, senior management, and employees. Until recently, the founders of tech firms were usually diluted (i.e., they had to give up voting control and economic rights). VC firms negotiated for control over the board of directors and for the power to fire the founders. Fried and Broughman showed that Mark Zuckerberg's

111. See Cable, *supra* note 63, at 616–17.

example (of a founder maintaining control over a firm after an IPO) is an exception and not the rule.¹¹²

Unicorns are different from small or medium-size start-ups because they raise large amounts of capital in private mega deals of \$100 million or more from a mixed group of investors, including non-traditional investors. The mega deals allow unicorn founders to prolong the timeline to IPO or trade sale. These offerings are not registered with the SEC. Alternative venture capital investors play a major role in contributing to the transition in equity ownership and capital formation in the United States toward models of private ownership.¹¹³ The changes in the incentives and the composition of the investor groups give unicorn founders greater power vis-à-vis preferred shareholders and minority common shareholders to oppose a sale to keep the company private longer.¹¹⁴ This also means that employees can no longer be protected by traditional investors who had the power to sanction the founders for bad behavior.¹¹⁵

With employees having no access to accurate information about the company, the mere reported but unconfirmed firm valuation can lead them to take on more risk than anticipated and to pay large amounts of taxes (for example, on profits that may never materialize). Moreover, in some cases, employees may be systematically misled by founders to think that they are rich but, in reality, might only be rich on paper. This could result in the employee-investor making the wrong investment decisions, such as exercising their options prematurely. There is also always a chance that the value of the unicorn's common stock will drop below the strike price, which renders the employee's options practically worthless. The employees could end up paying to work for their company when their stock option profits do not materialize.¹¹⁶

Employees only benefit from their vested options if their company goes public. If the company goes public, then they are able to sell the stock and realize the upside value they helped create.¹¹⁷ But, as noted, today many unicorn companies remain private while their employees must pay large sums

of money out-of-pocket for the exercise price and taxes¹¹⁸ on profit that might never in fact materialize.¹¹⁹ The value of equity options to employees is diminished—helping explain why unicorn firms are experiencing difficulties with attracting, engaging, and retaining talent.¹²⁰ The longer the unicorn stays private, the longer the employees are locked in.

II. THE ROLE OF STOCKHOLDER INSPECTION RIGHTS IN CORPORATE LAW

Stockholder inspection rights are one of the most powerful fundamental rights in corporate law. They allow stockholders to inspect nonpublic company information to mitigate agency problems and asymmetry of information. Access to nonpublic information allows the stockholder to protect their economic interests by making informed decisions, holding the company fiduciaries accountable, and subjecting them to oversight.

A. Bargaining Inequality, Asymmetric Information, and Agency Costs

Employees who are stockholders or stock option holders experience inequality in bargaining power, which is why the mandatory inspection rights rules of corporate law are so important and should not be waived easily. Their firm—the employer—has more negotiation power and can bargain for more favorable terms.¹²¹

118. Federal and state taxes are imposed on exercise of equity options, even when there is no active market to sell options and such a market might never materialize. See Richard Lieberman, *2017 Tax Act Impact on Employee Benefits and Executive Compensation*, LEXIS PRAC. ADVISOR J. (Apr. 18, 2018), https://www.lexisnexis.com/community/insights/legal/practical-guidance-journal/b/pa/posts/2017-tax-act-impact-on-employee-benefits-and-executive-compensation;__see_also_Client_Memorandum:_New_Tax_Act_Provides_Tax_Deferral_Opportunity_for_Private_Company_Equity_Compensation_Awards, DAVIS POLK & WARDWELL LLP (Jan. 8, 2018), https://www.davispolk.com/files/2018-01-08_tax_act_provides_deferral_opportunity_private_company_equity_compensation_awards.pdf; Kathleen Pender, *Bills Would Ease Tax Burden of Private-Company Stock Options*, S.F. 119. This can also lead to a cash-flow issue for the unicorn firm. The firm is required to withhold and remit income and employment taxes at the time of the exercise (NSOs) or vesting (RSUs), but it is not transferring any cash to the grantee from which it can withhold those amounts. See Scott Belsky, *Don't Get Trampled: The Puzzle For “Unicorn” Employees*, MEDIUM (Jan. 2, 2017), <https://medium.com/positiveslope/dont-get-trampled-the-puzzle-for-unicorn-employees-8f00f33c784f>.

121. JOELLE GAMBLE, *HOW TECHNOLOGY CHANGES THE BALANCE OF POWER IN THE LABOR MARKET* (2019), <https://groundworkcollaborative.org/resource/how-technology-changes-the->

Inspection rights are an important tool for stockholders in privately-held firms for the following reasons. Employees who invest in their firms and become stockholders usually experience fundamental information inadequacies as compared to the founder (or management) of the firm. There is always uncertainty concerning the potential or success of the entrepreneur's product, impact, or research.¹²² Investment in private firms inherently involves information asymmetry¹²³ and uncertainty, as well as agency problems,¹²⁴ which contribute to "adverse selection," where investors have difficulty with screening and selecting entrepreneurs.¹²⁵ The markets for allocating risk capital to private start-ups are inefficient.¹²⁶ Therefore, access to private nonpublic information is incredibly important to protect stockholders.¹²⁷ Note that the United States does not have separate corporate laws for private and public firms. However, there are fundamental differences between owning stock in a publicly-held versus a closely-held corporation. In the public corporation context, if a stockholder is dissatisfied with the ways in which the firm is managed or with the value of their stock, they can simply call their stockbroker, or use an app, and sell their stock on

ET AL., NIST GCR 02-841A, *UNDERSTANDING PRIVATE-SECTOR DECISION MAKING FOR EARLY-STAGE TECHNOLOGY DEVELOPMENT: A "BETWEEN INVENTION AND INNOVATION PROJECT" REPORT* (2005).

the market. In the private (closely-held) corporation context, the stockholder is “locked-in” and will typically find it very hard, if not forbidden by contract, to sell their stock and get liquidity.¹²⁸ Capital lock-in refers to a situation where a stockholder is not able to withdraw or “redeem” the capital that they contributed to the firm freely.¹²⁹ They cannot force the firm to distribute assets or buy back their shares.¹³⁰

An investment in a private firm is therefore inherently risky. Inspection rights are designed to mitigate some of the information asymmetry and agency problems. In return for investment capital, the entrepreneur agrees to disclose credible information about their firm to the investor, and to continue to disclose such information following the initial investment, so that the investor will be motivated to remain invested in the company. This reduces costs. Inspection rights provide the stockholder with a way to access valuable information about the private company’s operations and financial performance. An investor may not have an economic incentive to invest in a private firm if they did not have the ability to monitor the entrepreneur and value their interest in the company.

Employees do not have the same protections or bargaining power as typical sophisticated investors in start-ups. VCs can negotiate for and get voting-control provisions and other inspection rights. They are represented by lawyers who will probably flag such a waiver and not allow their clients to sign such a provision without negotiations. Employees typically are not able to negotiate for the same protections. As explained in greater detail below, the stock option agreement that employees sign ties them with “golden handcuffs” to the firm.¹³¹ The agreement is designed to attract, engage, and retain employees. Most employees would not be able to bargain away from the predominant practice of equity incentive plans because to do so might send a hostile signal to the market and to their employer, which they would like to avoid.¹³²

128. See Alon-Beck, *supra* note 7.

129. See Darian M. Ibrahim, *The New Exit in Venture Capital*, 65 VAND. L. REV. 1, 6 (2012); see also Margaret M. Blair, *Reforming Corporate Governance: What History Can Teach Us*, 1 BERKELEY BUS. L.J. 1, 27 (2004).

130. See Ibrahim, *supra* note 129; see also Blair, *supra* note 129, at 14 (citing early corporate charters and statutes that limited withdrawals to formal corporate dissolution).

131. “Golden handcuffs” refer to benefits that an employer provides to employees to discourage the employee from accepting employment elsewhere. It should be noted that there is a difference between early and late hires. These handcuffs do not work for late hires. For more on golden handcuffs, see Alon-Beck, *supra* note 7. For turnover in the tech industry, see *The Ugly Truth About Employee Turnover in Silicon Valley*, MENLO PARTNERS STAFFING, <https://mpstaff.com/the-ugly-truth-about-employee-turnover-in-silicon-valley/> (last visited Jan. 29, 2022).

132. See Edward B. Rock & Michael L. Wachter, *Islands of Conscious Power: Law, Norms, and the Self-Governing Corporation*, 149 U. PA. L. REV. 1619 (2001).

Many employees probably do not understand the risks associated with owning their company stock (or more accurately, options) as compared to other types of diversified investment alternatives. The Zuber example below illustrates the risks associated with exercising stock options while the company is still private and the adverse tax effects of such an investment decision. It is risky to extrapolate past performance into the future, even when employees work for a large private company that has historically done well.

Moreover, and more importantly, the problem of inaccurate unicorn firm valuation is a well-known and documented problem in finance literature.¹³³ This information asymmetry problem is very severe because it prevents unicorn employees from accurately valuing their stock options and making informed investment decisions. A decision on whether to exercise the stock option in order to gain standing in a potential lawsuit or be able to file a demand with a company to access stockholder information rights is a financial investment decision. The unicorn employee does not know if their stock options are worth anything without access to information.

B. Zuber Example

To illustrate this predicament, imagine you just received a job offer from a unicorn firm—Zuber. If you accept the offer, you will receive an annual salary of \$200,000 and 100,000 stock options. You need to figure out exactly how much the Zuber stock options are worth because a stock option award is different from a straightforward stock award. Note that as a stock-option-holder, you are not a shareholder yet. A stock-option-holder merely has an option, which is a contractual right to purchase a set number of shares in the future. If you accept this offer, then later on you will need to make an investment decision—i.e., a decision to exercise the options and purchase the stock or not.

If Zuber was a publicly-traded company, this decision on whether to exercise Zuber options would be easy: all you would have to do is look at Zuber's stock trading price and decide. But remember, Zuber is not a publicly-traded firm. Instead, because it is a unicorn, a privately-held firm, you will not find accurate public information about Zuber's share price.

There is always a risk associated with exercising stock options when the company is private because the stock can be “underwater.” Underwater means that you paid more for the stock than it is worth (according to current market price). If the purchase price (the “exercise”) for the stock option is

133. See *supra* note 15 and accompanying text.

higher than the market price for the stock after the company goes public or is acquired, then you will lose on your investment in the company.

To illustrate this point, let's return to our hypothetical: If you received stock options with an exercise price of \$6 per share, then you will pay the company (Zuber) \$6 per share to purchase the shares. So, you will pay \$600,000 for 100,000 shares of Zuber. But what if Zuber decides to go public and, unfortunately for you, the Zuber stock only trades for \$2 per share following the IPO? In this scenario, you paid more for the shares than they are worth (\$600,000) because the market price is lower than you anticipated (\$200,000). Note that exercising options will not generate a tax loss (\$400,000). Therefore, as an employee, you cannot apply this loss against your income. In this scenario, you basically paid for the privilege of working for Zuber.

Unfortunately, this is not the only or main problem associated with exercising the options. There are also important and detrimental tax issues. If you work for Zuber and decide to exercise your options (or settle your RSUs), then you will have an immediate tax liability. You will have to pay taxes on profit that might never materialize. It means that you have to pay out of pocket for both the strike price and the tax. Many unicorn employees may not be able to raise enough cash to pay for these expenses because of the high valuations of their firms.¹³⁴

Unicorns are private firms, and no one really knows what the future will bring. Their past performance, even if it is a solid one, is not necessarily a good predictor of their future performance. Most rank-and-file employees are naïve and should not be considered insiders for the purposes of making such an investment decision.¹³⁵ They do not have inside information on the firm's long-term prospects. At some point, as explained in further detail

134. Exercising incentive stock options can trigger the alternative minimum tax. See *Fundamentals of Equity Compensation*, PAYSAs, <https://www.paysa.com/resources/fundamentals-of-equity-compensation> [<https://perma.cc/DKW3-X9J8>]. Although Congress did not repeal the alternative minimum tax, it significantly increased the income exemption and phase-out amounts, leaving fewer start-up employees who receive stock options subject to the tax. See *6 Ways the 2018 Tax Reforms Affect Your Stock Compensation and Financial Planning*, MYSTOCKOPTIONS.COM, <https://www.mystockoptions.com/articles/index.cfm/ObjectID/22615723-D31E-CCDF-68284D3C456C3E3A> (last visited May 26, 2022). There is a new Internal Revenue Code § 83(i), which allows certain individuals, if certain conditions are met (such as the underlying stock is eligible stock and the corporation is an eligible corporation), to defer tax liability on the income earned from exercising options (or settlement of RSUs) for up to five years. I.R.C. § 83(i) (2018). This is intended to mitigate the problem described above concerning NSOs (and RSUs). For more on this, see Alon-Beck, *supra* note 7.

135. For more on naïve employees, see Bubb, Corrigan and Warren, who are criticizing federal retirement plans policy. Ryan Bubb et al., *A Behavioral Contract Theory Perspective on Retirement Savings*, 47 CONN. L. REV. 1317, 1323 (2015).

below, they will need to decide on whether to exercise or forfeit their options, without a guarantee that there will be an IPO in the future.

Unicorn employees become common shareholders when they exercise their options. There are different types of stock, including common and preferred. What it means to own common shares is that the Zuber employee, as a common stockholder, will be last in line to be paid in the event of a sale or other types of distribution.¹³⁶ Furthermore, unicorn employees do not have downside protection as common shareholders. If Zuber is sold to another in a fire sale in the future, then it is probable that Zuber employees will end up with nothing.¹³⁷ The case of *In re Good Technology Corp. Shareholder Litigation*¹³⁸ (“Good”) explains this problem of lack of downside protection.¹³⁹

Good was a successful unicorn firm that ultimately sold in a fire sale for almost half its value after running into financial distress. News of the fire sale came as a shock to Good’s employees. One day, the employees, who were common shareholders, discovered that the value of their stock in the firm went down substantially from \$4.32 to \$0.44 a share.¹⁴⁰ The investors, on the other hand, who held onto Good’s preferred share, were able to recover their investment in the firm and get paid from the sale.¹⁴¹

Prior to the fire sale, several Good employees took on loans to pay for the taxes to exercise their stock options. These employees never profited from their investment in the firm because the loan amounts (to pay for the tax bills) were much larger than what their stock was worth after the sale. Good is a cautionary tale concerning employees as investors who believed in the company and had no idea about its financial distress.¹⁴²

To summarize, unicorn employees need access to information in order to make an informed decision, especially due to the fact that pre-IPO unicorn

136. A sale of a start-up is more likely to happen today than an IPO. See empirical research on this below. See Alon-Beck, *supra* note 7.

137. For more on the drivers behind value-destroying trade sales, see Casimiro A. Nigro & Jörg R. Stahl, *Venture Capital-Backed Firms, Unavoidable Value-Destroying Trade Sales, and Fair Value Protections*, 22 EUR. BUS. ORG. L. valuations are very high. Companies design stock option plans to conserve cash while sharing ownership with employees and increasing the productivity of the employees. Additionally, in a recent Delaware case, *Riker v. Teucrum Trading, LLC*,¹⁴³ the Delaware Court of Chancery addressed a demand for books-and-records by an LLC member, and specifically recognized that valuation is a well-established statutory proper purpose. Rather, the focus in the case was on whether the documents requested were necessary in order to perform a valuation. However, there is still a lot of uncertainty in this area.

In *JUUL Labs, Inc. v. Grove*,¹⁴⁴ the Delaware Court of Chancery decided not to decide on whether a waiver of DGCL Section 220 rights would be enforceable. There is ambiguity in the case about a potential resolution on this issue, as correctly noted by a prominent Delaware litigator and commentator Francis G.X. Pileggi.¹⁴⁵ At footnote 14, the court provided citations to many Delaware cases that sowed doubt about the viability of that position, but then the court also cited cases at footnote 15 that more generally recognized the ability to waive even constitutional rights.¹⁴⁶

This Article highlights the fact that there are important differences between stockholders and stock option holders concerning information rights. Only a stockholder in a private company has a statutory and common law right to access information about the company. If a stockholder demands information (e.g., accessing books and records) but is refused by the company, then it is considered a violation of the stockholder's information right, which can be the basis of a stockholder oppression lawsuit. The stockholder can thus turn to the courts and seek judicial remedies that were designed specifically to enforce a stockholder's information rights.

But, what about stock option holders? They do not have this right or any protection. Therefore, this Article proposes an amendment to the DGCL, which would expand the statutory inspection rights under Section 220 to specifically include stock option holders.

C. The Statutory Design of Stockholder Inspection Rights

Stockholder inspection rights originated from the common law of England. The right was recognized in England as early as 1745.¹⁴⁷ The right

143. C.A. No. 2019-0314-AGB, 2020 WL 2393340, (Del. Ch. May 12, 2020).

144. 238 A.3d 904 (Del. Ch. 2020).

145. See *infra* note 253 and accompanying text.

146. *JUUL Labs, Inc.*, 238 A.3d at 919 nn.14–15.

147. See *Dominus Rex v. Fraternity of Hostmen in Newcastle-Upon-Tyne* (1795) 93 Eng. Rep. 1144 (KB). The early English case of *Dominus Rex* was one of the first cases to recognize the right of stockholders to inspect corporate books. See William T. Blackburn, *Shareholder Inspection Rights*, 12 SW. L.J. 61 (1958).

under English rule was not absolute and had several restrictions. For example, the shareholder had the right to inspect the books of the corporation at reasonable times, but the inspection had to be in good faith and for a proper purpose.¹⁴⁸ The idea behind this right was to provide shareholders with disclosures, which can improve efficiency and reduce information asymmetries.

Many states in the United States followed the English courts and codified this rule in their own statutes and applied it in their case law.¹⁴⁹ Twenty-four states adopted the Model Business Corporation Act (“MBCA”), which is a model act prepared by the Committee on Corporate Laws of the Section of Business Law of the American Bar Association. According to section 16.02 of the MBCA, inspection rights are mandatory immutable rules of law, which means they cannot be waived by the parties like default rules.¹⁵⁰

The Model Business Corporation Act (“MBCA”) section 16.02 provides that “[t]he right of inspection . . . may not be abolished or limited by a corporation’s articles of incorporation or bylaws.”¹⁵¹ Not surprisingly, Delaware did not adopt the MBCA, but rather codified its own comparable version of inspection rights. Many courts today look to Delaware case law when they are required to interpret inspection rights according to their own statutes.¹⁵²

Section 220 of the Delaware General Corporation Law also balances the rights of stockholders and management. On the one hand, it provides important protections to stockholders by allowing them to exercise their ownership rights and inspect the books and records of a Delaware corporation. On the other, it also protects the firm and management. DGCL Section 220 is not an absolute right. There are hurdles. A shareholder who wants access to information must have standing and proper purpose.

McConnell et al., *The Tools at Hand: Inspection of Corporate Records*, JONES DAY, <https://www.jonesday.com/files/Publication/70e4b38e-e3e9-4718-b4c9-a04247277901/Presentation/PublicationAttachment/f4507208-1c42-4add-a976-1dd7735d526e/ToolsAtHand.pdf> (last visited May 13, 2022).

150. MODEL BUS. CORP. ACT § 16.02(f) (AM. BAR ASS’N, amended 2016); see also Geis, *supra* note 17, at 429 (questioning the ability of states that adopted the MBCA to allow parties to contract around this provision).

151. *Id.* It should be noted that, according to comment 1 of the MBCA § 7.32, “a provision of a shareholder agreement that limited inspection rights under section 16.02 or the right to financial statements under section 16.20 might, as a general matter, be valid.” See *id.* § 7.32. cmt. 1. There are situations where shareholders can waive inspection rights in shareholder agreements according to this provision, as long as it is not against public policy. *Id.* This Article supports the view that do so in a stock option agreement, where the option holder is not yet a shareholder and might not be aware this waiver, is against public policy. See also Fisch, *supra* note 25.

152. See McConnell et al., *supra* note 149; Arctic Fin. Corp. v. OTR Express, Inc., 38 P.3d 701, 703 (Kan. 2002); see also Danzinger v. Luse, 815 N.E.2d 658 (Ohio 2004).

The inspection right is not absolute due to the understanding that there is a need to protect the firm from frivolous or meritless lawsuits, and to protect the firm's proprietary information. To have standing in court, the employee, as a shareholder, must first overcome the following hurdles.

1. Standing: Shareholder of Record Requirement

To have standing in court, the employee must be a shareholder of record. As noted, owning stock options does not qualify the employee as a shareholder.¹⁵³ Rather, the employee must first exercise their options (after they vest), buy the shares, and only then do they become a shareholder (and thus become eligible to demand to inspect their employer's books and records). Founders and investors usually get outright stock in the company, whereas start-up employees get stock options.

Stock option holders do not have standing under Section 220 unless they become shareholders. The decision to exercise the options and become a stockholder without access to information is problematic for the following reasons. There is always a great economic risk associated with exercising stock options when the company is private. This risk arises because of asymmetry of information and uncertainty.

Unicorn employees at many of the largest private (but secretive) start-ups across the country are uninformed about their rights, their firm's equity structure, or its overall finances, and thus should not be treated as traditional insiders.¹⁵⁴ In the economic literature, employees who are insiders are compared to gamblers or lottery winners because they have access to information and are well-positioned to monitor their company's progress.¹⁵⁵ Under these theories, the insiders' economic incentives are aligned with those of the founders', which is not the case for unicorn employees, as illustrated below.

Employees that work for a small-sized start-up can very well be regarded as insiders who have information on the operations and status of the firm. Unicorn employees work for very large—even quasi-public—companies with thousands of employees.¹⁵⁶ They are not necessarily privy

153. See *supra* Section III.B.

154. A unicorn is a large privately held venture-capital ("VC") backed company that is valued at over \$1 billion (a "unicorn"). For more on naïve employees, see Bubb et al., *supra* note 135, who criticize federal retirement plans policy.

155. For a further discussion on employee incentives, see generally Anderson, *supra* note 110 (discussing the status of employee options as securities); Bodie, *supra* note 110 (focusing on the availability of Rule 10b-5 actions); Smith, *supra* note 43 (focusing on the law and economics of equity compensation as private ordering); Jensen & Murphy, *supra* note 110 (advocating for equity compensation as a form of incentive-based executive pay).

156. See Cable, *supra* note 63, at 616–17.

to nonpublic information on the firm's performance. Additionally, as investors in private firms, they are locked-in and do not have a way of disciplining the firm's managers by threatening to withdraw their capital from the firm, which further contributes to governance problems within the firm.¹⁵⁷

2. Proper Purpose: The "Demonstration" Requirement

Proper purpose is another hurdle that is rooted in common law tradition. Even if the employee becomes a shareholder of record after exercising their stock options, the inspection right is not absolute but rather conditional. After exercising their options, the employee who became a new shareholder must "demonstrate a proper purpose for making such a demand."¹⁵⁸ The DGCL statute defines a "proper purpose" as "a purpose reasonably related to such person's interest as a stockholder."¹⁵⁹

Until recently, it was not clear whether an employee-shareholder could establish a proper purpose when that purpose is to ascertain the value of their stock. However, Delaware Vice Chancellor Travis Laster in *Woods v. Sahara Enterprises, Inc.*¹⁶⁰ clarified that a stockholder demanding corporate records under Section 220 is not required to explain *why* the stockholder wants to value their interest in the company to satisfy the recognized proper purpose of valuation.¹⁶¹

The court also provided a list of "proper purposes" that can be shown to satisfy Section 220 which included "to ascertain the value of his stock."¹⁶² The Delaware Supreme Court in *Lebanon County Employees' Retirement Fund v. AmerisourceBergen Corp.*,¹⁶³ clarified the circumstances in which stockholders are entitled to demand books and records.¹⁶⁴ This decision

157. See Larry E. Ribstein, *Should History Lock in Lock-in?*, 41 TULSA L. REV. 523, 524–25 (2006); see also Ibrahim, *supra* note 129, at 6–7.

160. 238 A.3d 879 (Del. Ch. 2020).

161. See *id.* at 890. Additionally, according to the decision in *Amerisource*, stockholders may state broader purposes for investigations under Section 220. *Lebanon Cnty. Emps.' Ret. Fund v. AmerisourceBergen Corp.*, No. 2019-0527-JTL, 2020 WL 132752, at *2 (Del. Ch. Jan. 13, 2020).

162. See *Woods*, 238 A.3d at 889.

163. No. 2019-0527-JTL, 2020 WL 132752 (Del. Ch. Jan. 13, 2020).

164. If a stockholder seeks to investigate credible allegations of mismanagement, they "need only establish by a preponderance of the evidence that there is a *credible basis* from which the court can infer a possibility of wrongdoing." *Id.* at *8 (emphasis added). "The 'credible basis' standard is 'the lowest possible burden of proof.'" *Id.* (citing *Seinfeld v. Verizon Commc'ns.*, 909 A.2d 117, 123 (Del. 2006)). A plaintiff need only make a credible showing that there are issues of wrongdoing. *Id.*

further suggests an inclination by Delaware courts to permit plaintiffs (who are stockholders) to use Section 220 to get “pre-lawsuit” discovery, even if it seems that there is no credible basis to believe there are actionable claims.¹⁶⁵ While *Amerisource* involved attempts to investigate allegations of mismanagement, the usage as “pre-lawsuit” discovery was not limited to such a purpose.¹⁶⁶

Additionally, there are new Delaware court decisions that have clarified the different types of documents that may be obtained under a Section 220 demand, which include, in limited circumstances, even communications such as personal emails or text messages.¹⁶⁷ Not surprisingly, there has been an increase in the number of Section 220 demands in recent years. The more stockholders use this investigation tool, the more potential for stockholders to file derivative lawsuits against directors and officers.

These developments perhaps encourage corporate attorneys to innovate, take advantage of bargaining inequality, and put limits on the information rights of certain stockholders—employees. Lawyers are paid to come up with new ways and practices to protect their clients—the firm and its management team. Thanks to cases like *Domo* and *Woods*, corporate lawyers who represent unicorn firms decided to innovate with a new practice—one that compels employees to waive their inspection rights under Section 220 as a condition to receiving stock options from the company.

D. Exploitation and Market Power

There are benefits and costs associated with disclosure, which affect the cost of capital when there is information asymmetry.¹⁶⁸ If private firms choose to disclose information to their stockholders generally, it reduces the information asymmetry between the stockholders (investors) and managers, which also reduces the cost of capital. Disclosure improves the liquidity of the stock and contributes to greater demand from other investor groups.

Information is power and disclosure is very important to unicorn firms. Federal intellectual property laws do not protect valuable tacit knowledge (as

opposed to formal, codified or explicit knowledge). Tech companies cannot easily use patent or trade secret law, for example, to prevent or deter imitation of tacit knowledge. Additionally, the current market dynamics have led to concentration in the information technology industry (especially in the digital tech industry).¹⁶⁹ There is a decline in competition in the technology sector. Both public and private larger tech firms are taking advantage of these market conditions to weaken competition and leverage their dominant position to strengthen their hold on the market.

Unicorns are spending a lot of resources to keep information private. Leakage of proprietary information about the firm can be used by the firm's competitors and hurt the firm's competitive advantage. Unicorns generally do not disclose financial and other information to anyone except major stockholders, who are able to protect their interests and specifically negotiate for contractual provisions such as for exit or voice.¹⁷⁰

Tech employees are the human capital that contributes to the knowledge in the firm. Tech firms have an incentive to protect their knowledge resources from imitation by others, because it helps the firm to generate rents from this valuable knowledge. One of the most common ways that leakage to competitors occurs is through employee mobility across firms.¹⁷¹

There are several ways to protect knowledge leakage when employees leave to go work for a competing firm, such as non-disclosure agreements and non-compete agreements.¹⁷² However, in practice, enforcement of these contractual arrangements depends on the geographic location of the firm, the court, and the court's willingness to do so. It is also very hard to enforce and detect knowledge spillover using these contractual arrangements, especially in innovation clusters, such as Silicon Valley, where a court might not be willing to enforce these arrangements. Therefore, corporate lawyers had to

innovate and come up with another mechanism. The stock option agreement is designed to retain the employee so that the employee does not have an incentive to compete with the firm or leave for a competitor.

There is a difference between insider and outside investor groups. It is not clear if unicorn founders trust major stockholders (preferred stockholders) to protect information. It is more likely that founders are compelled to disclose some information in order to induce investment in the firm. It all depends on the bargaining power of the founders and investors. Sophisticated accredited investors, such as VCs or alternative VCs, have bargaining power, conduct due diligence (investigation) prior to investment, and hence decide on whether to use “voice” (voting rights) or demand exit (aggressive redemption rights) when investing in unicorns. They are not only sophisticated players, but also are likely represented by lawyers. They can use their power to engage with the management to try to institute change.¹⁷³

Depending on the group of outside investors in question, there are different contractual provisions associated with the investments in the unicorns. The parties’ incentives can vary and depend on timing of the financing round, participating investors, and the performance of the start-up.¹⁷⁴ VC investors typically invest in earlier rounds than alternative VC investors and bargain for preferred stock, extensive control rights, and control of the start-up’s board of directors.¹⁷⁵ I find it hard to believe that such sophisticated investors would be willing to sign a waiver of statutory inspection rights. I was not able to find any evidence of such practice.

Employees are not sophisticated represented investors. Start-up founders and their lawyers have found a new way to abuse equity award information asymmetry to their benefit when dealing with employees—waiver of inspection rights. Inspection rights waivers are especially detrimental to minority common stockholders, such as employees, who are usually not represented, but are still required to make an investment decision, such as exercise their stock, or leave and compete with the firm. Since employees are minority shareholders, there are not only serious agency problems, but also a conflict of interest between majority and minority

common shareholders, which now plagues the corporate governance system in unicorn firms.

In the past, both start-up founders and rank-and-file employees used to belong to the same class of common shareholders. Their incentives were aligned. These days, however, founders of unicorn firms are able to negotiate for other, more powerful, contractual arrangements thanks to market changes and investments from alternative and VC investors. For example, in *Unicorn Stock Options*¹⁷⁶ and *Alternative Venture Capital*,¹⁷⁷ I shed light on these new practices. Founders are able to control the board of directors thanks to super voting rights and other types of contractual arrangements. These new arrangements enhance the power of founders within the firm at the expense of other employees. As a direct result of these developments, the interests of the employees and founders as common shareholders are not aligned anymore.

Unicorn founders choose to stay private to have more control over the firm, protect their proprietary information, keep it secret, and prevent leakages to competitors.¹⁷⁸ Founders also have an incentive to avoid the high costs associated with employee turnover. Tech employees are skilled labor, and as such, are in high demand. There is currently a shortage in talent in the global markets. This shortage in talented employees is expected to become more acute in coming years.¹⁷⁹

Tech companies limit leakage of information so that they can continue to maintain their market power, dominance, and crush competition, which raises the barriers to entry for small firms. There are several geographic tech regions in the United States, but the most known ones are Silicon Valley around San Francisco, and Route 128 in Boston. These areas enjoy concentrated technology development and access to capital. This success can be attributed to several factors, including robust investment in research and development efforts, availability of government funding, strong linkages

between academic institutions and industry, developed risk-capital networks, complementary infrastructure of suppliers (for example specialized law firms), and last but not least—a ruthless code of secrecy.¹⁸⁰ There are many urban legends about retribution for employees who break the code of secrecy.¹⁸¹

It is not surprising that unicorn firms have come up with this new practice to limit stockholder inspection rights. The next Part describes the rise in use of this new contractual innovation—stockholder inspection waivers—and its wide adoption and practice.

III. THE INVENTION OF STOCKHOLDER INSPECTION WAIVERS

Tech founders may claim that keeping their financial information private—even from their own minority stockholders—prevents the information from falling into rival hands. They may also claim that the lack of public scrutiny gives them freedom to invest for the long-term. However, with regard to employees that received stock, employees used to have a right to information under U.S. securities laws. Today, unicorns rely on regulatory arbitrage, a new exemption under U.S. securities laws, specifically Rule 701, to avoid providing their employees with disclosure of information.¹⁸²

The following is an investigation of the factors that contributed to the rise in the use of waivers.

A. SEC Continues to Ease Disclosure Obligations

Initially, U.S. securities laws were designed to protect all investors, including employees as investors. That meant that all companies in the United States were required to disclose financial and other information about the offering firm prior to offering securities to the public. U.S. laws, specifically the Securities Act of 1933 (the “Securities Act”), required a company that offers to sell its securities must first register the securities with the SEC.¹⁸³ During the registration process, the issuing company disclosed

182. 17 C.F.R. § 230.701. Thanks to Rule 701, unicorns are not required to provide employees with enhanced information, especially concerning the risks associated with investing in illiquid securities of a high-risk venture that is often controlled by founders who lack management experience.

183. *What Constitutes a Security and Requirements Relating to the Offer and Sales of Securities and Exemptions From Registration Associated Therewith*, AM. BAR ASS’N (Apr. 27, 2017), https://www.americanbar.org/groups/business_law/publications/blt/2017/04/06_loev/.

certain facts, including certified financial statements, a description of its assets and business operations, management composition, and more.¹⁸⁴ Things changed. Start-ups today enjoy several exemptions from registration thanks to a series of reforms to the federal securities laws beginning in 1988.¹⁸⁵

What should private companies disclose? There are several approaches to disclosure including a maximalist, minimalist, and intermediate approach.¹⁸⁶ Despite the multiple approaches, there is a consensus that there is a need for more disclosure.

We need a better disclosure regime to “prevent the market for equity-based compensation from becoming a market for lemons.”¹⁸⁷ Aran warns that employees will lose trust in equity compensation arrangements.¹⁸⁸ This is already happening, as evidenced by employees complaining on public platforms such as Glassdoor and PaySa.¹⁸⁹ Some employees as shareholders turn to the courts for help.

B. Workers Go to Court

Employees are now turning to the courts to gain access to information about their companies. Why courts? To invoke their statutory shareholder inspection rights.¹⁹⁰ Lawyers are familiar with a little secret: Shareholders

190. See James D. Cox, Kenneth J. Martin & Randall S. Thomas, *The Paradox of Delaware’s “Tools at Hand” Doctrine: An Empirical Investigation* (Eur. Corp. Governance Inst. L., Working Paper No 498/2020, 2020), <https://ssrn.com/abstract=3355662>.

can make a demand on the company to inspect the books and records, and when the company refuses, shareholders turn to courts.

In Delaware, DGCL Section 220 provides protection to stockholders by allowing them to exercise their ownership rights and inspect the books and records of a Delaware corporation.¹⁹¹ In *Cedarview Opportunities Master Fund v. Spanish Broad. System, Inc.*,¹⁹² the Court of Chancery of Delaware held that this ownership right “cannot be eliminated or limited by a provision in a corporation’s certificate of incorporation.”¹⁹³ But, there is ambiguity in the case law about waiving these rights by contract. Can employees (who are not yet stockholders) waive this right by entering into a contract with the corporation such as a stock option agreement? And, in the event of litigation, would a Delaware court side with management or employees? The Delaware Court of Chancery has yet to answer these questions.

One of the first cases before the Delaware Chancery was *Biederman vs. Domo*.¹⁹⁴ Domo is a business intelligence and data visualization company, which was private at the time.¹⁹⁵ On January 26, 2017, the *Wall Street Journal* reported that Jay Biederman—a former employee and minority shareholder—finally compelled the company to open up its books.¹⁹⁶ Biederman used an “obscure” Delaware law, Section 220, to inspect Domo’s books and records.¹⁹⁷

Biederman wanted information as to the value of his holdings.¹⁹⁸ He was refused, laid off, and had to litigate with Domo for over a year.¹⁹⁹ Biederman received stock options under his company’s employee stock

incentive plan.²⁰⁰ He exercised those options and became a shareholder by purchasing over 64,000 shares after his options vested.²⁰¹ Therefore, Biederman was both a shareholder and a stock option holder. He wanted to review Domo's financial statements to value his position in the company.²⁰² Domo was a private company at the time and was not required to disclose its financial information to the public.²⁰³ Despite the fact that it raised over \$1 billion and joined the unicorn club, it is not clear whether its valuation was aggressive or justified.²⁰⁴

Domo was a unicorn firm that stayed private for long periods of time while avoiding public disclosures that would reveal its financial conditions and fair market value. Domo, like other unicorn firms, is also known for its "exaggerated valuations."²⁰⁵ Prior to its IPO, Domo was valued as high as \$2 billion, which means that immediately following the IPO, about 75% of that value (compared to the valuation) was erased.²⁰⁶ According to Gornall and Strebulaev, Domo was overvalued by 16 to 17%.²⁰⁷ This example illustrates why it is critical that employees have access to real data, not just exaggerated valuations put out by company leadership.²⁰⁸

During the *Domo* litigation, Vice Chancellor Sam Glasscock III of the Delaware Court of Chancery ruled against the company and ordered Domo

to provide Biederman with audited financial reports.²⁰⁹ As Laine Mervis summarized:

The Court stated: “There is no question that valuation is a proper purpose under Section 220, particularly in a corporation like this which is not particularly transparent. A stockholder is entitled to value his shares.” The Court ordered that “three years of audited financials” was sufficient to this proper purpose.²¹⁰

The decision came after many months of media scrutiny where *The Wall Street Journal* repeatedly reported on Domo’s refusal to provide Biederman with financial records.²¹¹ The *Domo* case was celebrated by the press as a win to employees.²¹²

The publicity of this case and other cases mentioned below inspired a wave of articles, law-firm memos, and client alerts on the ability to waive inspection rights.²¹³ Moreover, leading law firms, acting through the National Venture Capital Association (“NVCA”), added provisions to existing contracts to thwart the *Domo* effects.²¹⁴

C. Contractual Innovation

Despite its initial promise, *Domo* had an unintended consequence for employee stock option holders and employee stockholders. In order to avoid

214. See *infra* Section III.F.

disclosing information to employees, unicorns adopted a waiver of statutory stockholder inspection rights.

Many tech companies are now requiring their employees to sign a waiver provision entitled, “Waiver of Statutory Information Rights,” which states:

Waiver of Statutory Information Rights. Purchaser acknowledges and understands that, but for the waiver made herein, Purchaser would be entitled, upon written demand under oath stating the purpose thereof, to inspect for any proper purpose, and to make copies and extracts from, the Company’s stock ledger, a list of its stockholders, and its other books and records, and the books and records of subsidiaries of the Company, if any, under the circumstances and in the manner provided in Section 220 of the Delaware General Corporation Law (any and all such rights, and any and all such other rights of Purchaser as may be provided for in Section 220, the “Inspection Rights”). In light of the foregoing, until the first sale of Common Stock of the Company to the general public pursuant to a registration statement filed with and declared effective by the Securities and Exchange Commission under the Securities Act of 1933, as amended, Purchaser hereby unconditionally and irrevocably waives the Inspection Rights, whether such Inspection Rights would be exercised or pursued directly or indirectly pursuant to Section 220 or otherwise, and covenants and agrees never to directly or indirectly commence, voluntarily aid in any way, prosecute, assign, transfer, or cause to be commenced any claim, action, cause of action, or other proceeding to pursue or exercise the Inspection Rights. The foregoing waiver applies to the Inspection Rights of Purchaser in Purchaser’s capacity as a stockholder and shall not affect any rights of a director, in his or her capacity as such, under Section 220. The foregoing waiver shall not apply to any contractual inspection rights of Purchaser under any written agreement with the Company.²¹⁵

This waiver illustrates that unicorn employees who sign this waiver are oppressed because they do not have access to information about the risk of exercising their stock options or the valuation of their company, even if they later exercise their options and become stockholders. This is true until and unless the company decides to go public.

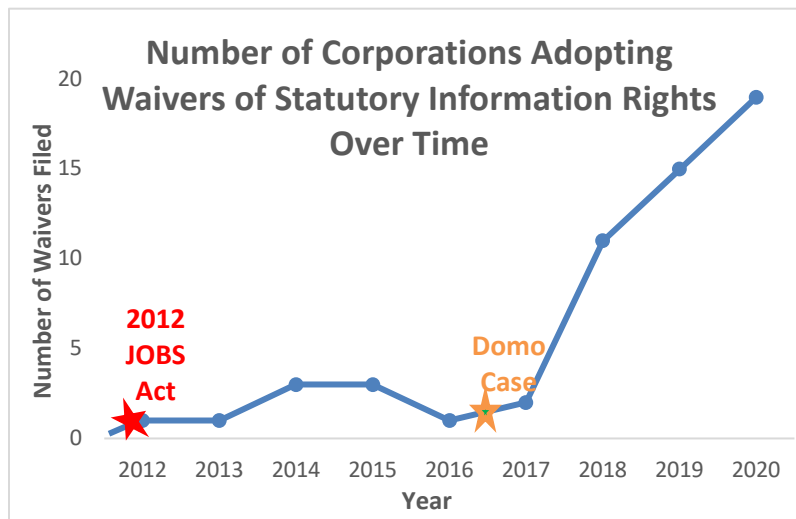

Most employees are unable to bargain away from this practice. If they wanted to do so, most employees would have to refuse equity incentive plans

215. See generally *Waiver of Statutory Information Rights Sample Clauses*, L. INSIDER, <https://www.lawinsider.com/clause/waiver-of-statutory-information-rights> (last visited May 14, 2022).

altogether, which might send a hostile signal to the market and to their employer that they would probably like to avoid.²¹⁶

Utilizing waivers is gaining momentum. Relying on a data set of the SEC's public filings for companies that filed an IPO prior to and following *Domo*, I found many examples of companies that are using this new language.²¹⁷ That is why the results in Figure 1 are not surprising. I also found that a few companies started using the "Waiver of Statutory Information Rights," immediately after the enactment of the JOBS Act in 2012. The following findings make note of the timing following the 2012 JOBS Act and *Domo*.

Figure 1. The Number of Corporations Adopting Waivers of Statutory Information Rights Over Time.

The line graph shows the yearly number of filings that included a waiver between 2012 (when the waiver first appeared) and 2020. The line graph also notes the timing between the 2012 JOBS Act and the *Domo* case to show the change over time. I found that the waiver became popular following the

Domo case, possibly due to all the financial press coverage, and the publication of client alerts by large law firms.

Delaware has to make a decision on this issue soon. In a recent case, *JUUL Labs, Inc. v. Grove*,²¹⁸ the Delaware Court of Chancery noted that it was not deciding whether waivers of a stockholder's statutory inspection rights under Section 220 in JUUL Labs' form agreements would be enforceable.²¹⁹ That being said, the court almost deliberately left this question open for further deliberation.

There is perhaps a plausible reason for this "uncertainty." On the one hand, we have, in my opinion, a very clear situation of a mandatory law that should not be contracted around.²²⁰ On the other hand, in recent years, Delaware courts and the legislature have recognized the ability to waive statutory and even constitutional rights.²²¹

218. 238 A.3d 904 (Del. Ch. 2020).

219. *Id.* at 919.

220. The Delaware Court in footnote 14 of the *JUUL* case cited the following cases that state that the parties cannot waive inspection rights:

See State v. Penn-Beaver Oil Co., . . . 143 A. 257, 260 ([Del.] 1926) ("[T]he provision in defendant's charter which permits the directors to deny any examination of the company's records by a stockholder is unauthorized and ineffective."); *Marmon v. Arbinet-Thexchange, Inc.*, 2004 WL 936512, at *5 (Del. Ch. Apr. 28, 2004) ("Nor could they rely upon a certificate provision prohibiting disclosure to avoid a shareholder's inspection right conferred by statute."); *BBC Acq. Corp. v. Durr-Fillauer Med., Inc.*, 623 A.2d 85, 90 (Del. Ch. 1992) (holding that a contract with a third party could not be used to limit inspection rights, which "cannot be abridged or abrogated by an act of the corporation"); *Loew's Theaters, Inc. v. Commercial Credit Co.*, 243 A.2d 78, 81 (Del. Ch. 1968) (holding that charter provision which limited inspection rights to holder of 25% of shares was void as conflicting with statute); *State ex rel. Healy v. Superior Oil Corp.*, 13 A.2d 453, 454 (Del. Super. Ct. 1940) ("In Delaware it has been considered that the right of a stockholder to examine the books of the company is a common law right and can only be taken away by statutory enactment."); *State v. Loft, Inc.*, []156 A. 170, 173 (Del. Ch. 1931) (following *Penn-Beaver*).

Id. at 919 n.14.

221. In footnote 15 of the *JUUL* case, the Delaware Court of Chancery cited to the following cases that recognized the ability to waive not only inspection rights but even constitutional rights:

See Baio v. Commercial Union Ins. Co., 410 A.2d 502, 508 (Del. 1979) ("Clearly, our legal system permits one to waive even a constitutional right . . . and, a fortiori, one may waive a statutory right.") (citations omitted); *see, e.g., Graham v. State Farm Mut. Auto. Ins. Co.*, 565 A.2d 908, 913 (Del. 1989) (holding that an arbitration clause in a contract effectuated a valid waiver of the constitutional right to a jury trial); *Manti Hldg., LLC v. Authentix Acq. Co.*, 2019 WL 3814453, at *4 (Del. Ch. Aug. 14, 2019) (concluding "that waiver of appraisal rights is permitted under Delaware law, as long as the relevant contractual provisions are clear and unambiguous"); *Tang Capital P'rs, LP v. Norton*, 2012 WL 3072347, at *7 (Del. Ch. July 27, 2012) (holding that the plaintiff contractually waived its rights to seek a receivership under Section 291 of the DGCL); *Libeau v. Fox*, 880 A.2d 1049, 1056 (Del. Ch. 2005) (holding that the plaintiff waived her right to statutory partition by contract, noting that "[b]ecause it is a statutory default provision, it is unsurprising that the absolute right to partition might be relinquished by contract, just

D. Mandatory Rules and Private Ordering

Despite the fact that different states have different corporate laws, all these laws have something in common: each has a set of default and immutable rules. States adopted these corporate law rules to make the incorporation process easier, cheaper, and more efficient.

The “default” or “gap-filling” rules adopted by states give parties a choice. They can choose to use any of the default rules when setting up a company. The rules are standardized and meant to save the parties on transaction costs that are associated with setting up a company. “Default” means that the parties can alter these rules or contract around them by using other specific language in the agreements that they enter into with each other.

Immutable rules, on the other hand, are mandatory rules—ones the parties cannot contract around. Section 220 of the DGCL, for example, is a mandatory rule. Distinguishing between default and immutable rules is attributed to the contractarian view of corporate law, which is part of the law and economics view that regards corporate entities as a “nexus of contracts.”²²² The prominent supporters (and perhaps intellectual founders) of this view are Judge Frank Easterbrook and Professor Daniel Fischel, as well as Professors Michael Jensen and William Meckling.²²³

The firm is not simply regarded as a single entity but rather a nexus of contracts.²²⁴ Firms are made of a set of different contracts between the firm’s

as the right to invoke § 273 to end a joint venture or to seek liquidation may be waived in the corporate context”); *Red Clay Educ. Ass’n v. Bd. of Educ. of Red Clay Consol. Sch. Dist.*, 1992 WL 14965, at *6 (Del. Ch. Jan. 16, 1992) (holding that a provision in a collective bargaining agreement constituted an effective waiver of negotiation right under unfair labor practices statute).” The *Kortum* decision, cited above, held that a bilateral agreement had not waived statutory inspection rights where the waiver was not “clearly and affirmatively” expressed. See *Kortum*, 769 A.2d at 125; *accord Schoon v. Troy Corp.*, 2006 WL 1851481, at *2 (Del. Ch. June 27, 2006). Perhaps even a clear and express waiver would be contrary to public policy under *Penn-Beaver* and its progeny, but the standard set forth in *Kortum*, at minimum, implies that a stockholders’ agreement could waive statutory inspection rights if the waiver was sufficiently clear.

various constituencies, such as management and labor. Additionally, according to the transactional cost theory of the firm,²²⁵ incomplete contracts are the reason for the creation of the firm. How does this affect our understanding of corporate law? As stated eloquently by Professor Cox, “[t]o nexus-of-contracts adherents, corporate rules are not mandatory but default rules; the parties are free to tailor the relationship to their own particular needs.”²²⁶ As such, the parties are not obligated to follow them but are free to tailor the relationship in an agreement as they see fit.

Cox criticized the fact that the Delaware legislature in 2015 amended the Delaware General Corporation Law “to authorize forum-selection bylaws.”²²⁷ The Delaware legislature acted following a decision by the Delaware Court of Chancery, *Boilermakers Local 154 Retirement Fund v. Chevron Corp.*²²⁸ In *Boilermakers*, the court of chancery upheld a corporate bylaw provision that was adopted unilaterally by the corporation’s directors, which designates Delaware as the exclusive forum for certain types of stockholder litigation.²²⁹ The court found that the forum selection bylaws were statutorily and contractually valid.²³⁰ The end result is that today directors of a Delaware corporation can adopt such provisions to prohibit the stockholders from suing them in other states, except for Delaware.²³¹

It is no secret that the Delaware courts have a laissez-faire attitude toward corporate governance contracting.²³² Professor Jill Fisch coined the term “new governance” to illustrate the ways in which private ordering is

used to structure governance rights in organizational documents.²³³ It is uncertain on whether Delaware courts will uphold waivers of stockholder inspection rights.

Dicta in several cases might suggest that the court of chancery may be willing to uphold such waivers.²³⁴ On the other hand, in other cases, the court did not allow parties to limit stockholder rights. In *Kortum v. Webasto Sunroofs Inc.*,²³⁵ the court observed that a shareholder's agreement does not waive the statutory inspection right and that such a waiver must be "clearly and affirmatively expressed."²³⁶ In *Schoon v. Troy Corp.*,²³⁷ the court rejected the argument that the stock purchase agreement limits, in any way, the information that must be provided under Section 220.²³⁸

In the event that the court of chancery decides to enforce the agreement between the parties, the next step in the analysis should be to determine: "What constitutes consent?" Traditional contract theory (and Coase) relies on bargaining that can then result in the consent to enter into an agreement.²³⁹ Consent (or the lack thereof) is linked to another fundamental theory of private ordering: The hypothesis that the resulting contract will account for the terms and these terms are fully priced into the value of the firm's securities.²⁴⁰

Regardless of whether one agrees with this theory of the firm or not, the elements of consent and meeting of the minds are necessary for the contractual paradigm to work.²⁴¹ Regarding employees, in several cases the employees stated that they did not consent to the contract arrangement and had no knowledge that they were waiving their stockholder inspection rights.²⁴² Would that make a difference? The employees are in a holdup situation.

241. *See* Cox, *supra* note 224, at 264.

242. *See supra* note 189 and accompanying text.

The problem with employees is severe because they entered into a contract with a company under the impression that the start-up was going to have an exit.²⁴³ However, if they end up working for firms that become unicorns (meaning they stay private for long periods of time) then the employees are in a holdup situation because they cannot exit easily, they have to make an investment decision without information, and they might need to renegotiate the contract with the company *ex post*.

It is clear that the Delaware courts allowed parties to use private ordering to contract around other types of mandatory laws.²⁴⁴ Recently, in *Manti Holdings, LLC v. Authentix Acquisition Co.*,²⁴⁵ private equity and venture capital investors won the case when the Delaware Supreme Court confirmed the enforceability of appraisal waivers by private contract.²⁴⁶ *Manti*, however, should be distinguished from cases like *Domo* or *JUUL* because of the negotiation power of the parties involved. In *Manti*, the stockholders that agreed to the waiver were sophisticated, informed, and represented by counsel. They presumably had some bargaining power, unlike company employees who are not sophisticated, informed, or represented by counsel when they enter into stock option agreements.²⁴⁷

What about Section 220? If the court feels that there is a vague legal standard here, perhaps it is waiting for the Delaware legislature to change the law so that parties can account *ex ante* to this complexity? As we know, creating bright-line rules is very important for lowering costs and creating certainty for all the parties involved. This issue needs to be resolved sooner rather than later.

Delaware courts may endorse this should they hear an appeal from *JUUL*. Moreover, this issue can also be litigated in other states, outside of Delaware, due to concern by plaintiff bar that Delaware courts will side with management. In *JUUL*, for example, the suit was brought in California, invoking California's Section 1601.²⁴⁸ Until now, it was my understanding

243. See Mark A. Lemley & Andrew McCreary, *Exit Strategy*, 101 B.U. L. REV. 1, 1 (2021) (“The venture capital funding model that dominates the tech industry is focused on the ‘exit strategy’—the ways funders and founders can cash out their investment. While in common lore the exit strategy is an initial public offering (‘IPO’), in practice IPOs are increasingly rare. Most companies that succeed instead exit the market by merging with an existing firm.”).

248. California adopted Section 1601 inspection of books and records from the MBCA. CAL. CORP. CODE § 1601 (West 2022).

that in a case like this, a California court is entitled to apply California law, because the plaintiff is a California resident, and is seeking to inspect the books and records of a Delaware corporation that is doing business as a foreign corporation in California.

Stephen Bainbridge postulates that he “long understood (and taught) that shareholder inspection rights are a rare exception to the internal affairs doctrine.”²⁴⁹ To my surprise, the Delaware court in *JUUL* held that under U.S. Supreme Court and Delaware Supreme Court precedent, stockholder inspection rights are a matter of internal affairs. Are they? The following is a short explanation of the court’s analysis, and more importantly the ramifications for future corporate practice and litigation.

E. Internal Affairs

Every state in the United States has its own unique set of state corporate laws. These laws provide a standard set of rules for investors, shareholders, managers, creditors, directors, and other stakeholders. The differences in these laws are possible thanks to a choice of law rule called the “internal affairs doctrine.”²⁵⁰

Under the internal affairs doctrine, the laws that govern the corporation and any future disputes between the parties arising from the internal affairs of the corporation are determined by the state of incorporation.²⁵¹ That is why the state of incorporation governs the disputes between parties, even when the firm is predominantly doing business in another state and is located outside the state of incorporation.

In the *JUUL* case, a claim was brought in California to inspect the books. *JUUL* is a foreign corporation doing business within the borders of California. It is a corporation outside of California, in Delaware. At issue is which state law governs: California or Delaware? This is a conflicts of law question. It involves the rights of a shareholder of a Delaware corporation

249. Stephen Bainbridge, *Are Shareholder Inspection Rights Subject to the Internal Affairs Doctrine?*, PROFESSORBAINBRIDGE.COM BLOG (Oct. 5, 2020), <https://www.professorbainbridge.com/professorbainbridge.com/2020/10/are-shareholder-inspection-rights-subject-to-the-internal-affairs-doctrine.html>. Building on Bainbridge’s work, I also teach the case *Crane Co. v. Anaconda Co.*, 346 N.E.2d 507, 509 (N.Y. 1976), in which the court applied New York law to determine whether a shareholder (that was incorporated in Illinois) was eligible to examine the stockholder list of a company incorporated in Montana. See *Crane*, 346 N.E.2d at 509 (detailing that access to stockholder lists, in fact, is a well-established exception to the internal affairs doctrine as a matter of both corporate law and conflicts of law).

250. See Reed & Brown, *supra* note 213; Mohsen Manesh, *The Corporate Contract and the Internal Affairs Doctrine*, CLS BLUE SKY BLOG (Sept. 8, 2021), <https://clsbluesky.law.columbia.edu/2021/09/08/the-corporate-contract-and-the-internal-affairs-doctrine/>.

251. See Reed & Brown, *supra* note 213; see Manesh, *supra* note 250.

that is headquartered in California and doing substantial business in California. It poses special problems because this issue can be determined differently depending on the state in question. It should be noted that these types of cases can, and probably will, continue to come up in this context, as illustrated by the empirical investigation below.

The Restatement (Second) of Conflict of Laws, provides that states can exercise authority to require disclosure.²⁵² However, this is an evolving and intriguing area of the law, which has been, and still is, evolving rapidly. As noted by Francis Pileggi, Section 220 is not for the faint-hearted.²⁵³ It is well established that a foreign corporation authorized to do business in a state is going to be subject to that domestic state's statutory provisions.²⁵⁴ That is, unless the language in the domestic state's statute has some sort of limitations, such as explicit language that it only applies to domestic corporations. Most states respect requests for access to corporate books and records.²⁵⁵

The *JUUL* case raises constitutional questions, and inquiries about the concept of the corporation and limits of state power.²⁵⁶ State sovereignty

252. RESTATEMENT (SECOND) OF CONFLICT OF LAWS § 304, cmt. d (AM. L. INST. 1971).

254. See *Milliken v. Meyer*, 311 U.S. 457, 464 (1940); *Pennoyer v. Neff*, 95 U.S. 714, 723 (1877) (establishing that citizens may be subject to the *in rem* personal jurisdiction of another state, even if they do not reside there, if they have property situated in that other state); see also *Foreign Corporations*, SAYLOR ACAD., https://saylordotorg.github.io/text_business-law-and-the-legal-environment-v1.0-a/s50-02-foreign-corporations.html (last visited May 14, 2022). See generally Comment, *Foreign Corporations—State Boundaries for National Business*, 59 YALE L.J. 737 (1950); William L. Holby, “Doing Business”: *Defining State Control Over Foreign Corporations*, 32 VAND. L. REV. 1105 (1979).

255. In *JUUL*, in footnote 7, the court states that there is a substantial volume of authority that posits that the internal affairs doctrine should not limit the ability of a non-chartering jurisdiction to grant rights to inspect the books and records of a foreign corporation. *JUUL Labs, Inc. v. Grove*, 238 A.3d 904, 913 n.7 (Del. Ch. 2020). The court cited the following sources:

See, e.g., 36 Am. Jur. 2d *Foreign Corporations* § 58, Westlaw (database updated Aug. 2020) . . . ; *id.* § 377 . . . ; Deborah A. DeMott, *Shareholder Derivative Actions: Law and Practice* § 2:13(1) (2019–20) (collecting “inspection cases” involving the “application of forum-state law” to a foreign corporation); K. M. Potraker, Annotation, *Stockholder’s Right to Inspect Books and Records of Foreign Corporation*, 19 A.L.R.3d 869 (1968) (collecting cases); see also Elvin R. Latty, *Pseudo-Foreign Corporations*, 65 Yale L.J. 137, 138–39 (1955) (“Legislation relating to corporations not infrequently contains protective provisions that the parties to be protected cannot ‘waive’ by contract in drafting the charter.”).

Id.

256. The internal affairs doctrine rises to the level of a constitutional doctrine. See Stephen Bainbridge, *Can California Require Delaware Corporations to Comply with California’s New Board of Director Gender Diversity Mandate? No.*, PROFESSORBAINBRIDGE.COM BLOG (Sept. 1,

suggests that the state can exercise its power and authority within its borders (jurisdiction).²⁵⁷ Each state has powers to subject persons, including domestic and foreign corporations, and goods to the process of its courts based on its adjudicative jurisdiction.²⁵⁸ The crucial question that arises from the *JUUL* case is whether Delaware's jurisdiction extends outside its borders. Is a California court going to tell the parties that they need to take this lawsuit to Delaware? Or will they apply Delaware law?

The important takeaway from the *JUUL* case is that Delaware law applies for inspection cases, regardless of where a company's principal place of business is located.²⁵⁹ It is not surprising, therefore, that the Delaware court in *JUUL* declared that the employee's rights as a stockholder are governed by Delaware law, and that they thus could not seek an inspection under California's Section 1601.²⁶⁰

2018), <https://www.professorbainbridge.com/professorbainbridgecom/2018/09/can-california-require-delaware-corporations-to-comply-with-californias-new-board-of-director-gender.html>; Stephen Bainbridge, *California Corporate-Board Quota Law Unlikely to Survive a Constitutional Challenge*, WASH. LEGAL FOUND. (Oct. 2, 2018), <https://www.wlf.org/2018/10/02/wlf-legal-pulse/california-corporate-board-quota-law-unlikely-to-survive-a-constitutional-challenge/>.

257. According to the *JUUL* court, “[t]hat concept of the corporation (and of state-chartered entities more generally) can have implications for the valid exercise of one state’s power in relation to other states[.]” *JUUL Labs, Inc.*, 238 A.3d at 913 n.7.

258. According to the *JUUL* court, “the DGCL rests on a concept of the corporation that is grounded in a sovereign exercise of state authority: the chartering of a ‘body corporate’ that comes into existence on the date on which a certificate of incorporation becomes effective.” *Id.* (citing DEL. CODE ANN. tit. 8, § 106 (2020)).

259. “Under principles articulated by the Supreme Court of the United States and applied by the Delaware Supreme Court, Delaware law governs its internal affairs. The scope of Grove’s inspection rights is a matter of internal affairs, so Delaware law applies.” *Id.* at 907.

260. “Because Grove’s inspection rights implicate the Company’s internal affairs, Grove must pursue any remedy in this court under the exclusive forum-selection provision in the Company’s certificate of incorporation.” *Id.* The court cites the following sources:

George S. Geis, *Information Litigation in Corporate Law*, 71 Ala. L. Rev. 407, 448 (2019) (“Inspection rights clearly relate to the internal affairs of the corporation . . .”); P. John Kozyris, *Corporate Wars and Choice of Law*, 1985 Duke L.J. 1, 63 (stating that “[c]ertain internal affairs matters are even less amenable to differential treatment than others” and that “[t]he hard core areas where ‘indivisible unity’ is paramount should include first and foremost the rights that attach to corporate shares” like “obtaining information” and “inspecting corporate records”); Deborah A. DeMott, *Perspectives on Choice of Law for Corporate Internal Affairs*, 48 L. & Contemp. Probs. 161, 168 (1985) [hereinafter DeMott, *Perspectives on Choice of Law*] (describing “shareholders’ inspection rights” as one of the “quintessentially internal matters”); see *Restatement (Second) of Conflict of Laws* § 304 (concluding that the law of the state of incorporation generally should “determine the right of a shareholder to participate in the administration of the affairs of the corporation”); 17 William Meade Fletcher et al., *Fletcher Cyclopedic of the Law of Private Corporations* § 8434 (Sept. 2019 update) (“It has been held that shareholder meetings and maintenance of books and records were ‘internal affairs’ of the corporation not subject to regulation in another state.”).

Id. at 915 n.8.

But the question remains: What about the other states? Are they going to follow Delaware or resist? Delaware is the state of choice for incorporation for many firms in the United States and around the world. What about unicorns? In a separate study, relying on hand collected data consisting of various filings, I found that eighty-nine percent of the unicorn firms in the United States chose to incorporate in Delaware.²⁶¹ Thus, any Delaware court decision on this issue will determine the rights of hundreds of thousands of unicorn employees across the United States.

There is still uncertainty with regard to choice of law clauses because the question of whether forum selection clauses, for example, are even enforceable is usually highly contested in the United States. Can contracting parties exercise their autonomy and select via contract the *forum* in which these types of books and records disputes will be resolved? The answer to this question requires further research on constitutional law and is therefore outside the scope of this Article.

One thing is clear: Other states can, and in practice do, define the terms by which stockholders of a foreign corporation can inspect books and records in their jurisdiction. Unfortunately for practitioners, this means uncertainty. A Delaware corporation is going to be subjected to different legal and policy standards, depending on the specific jurisdiction and the ways in which that jurisdiction follows Delaware law.

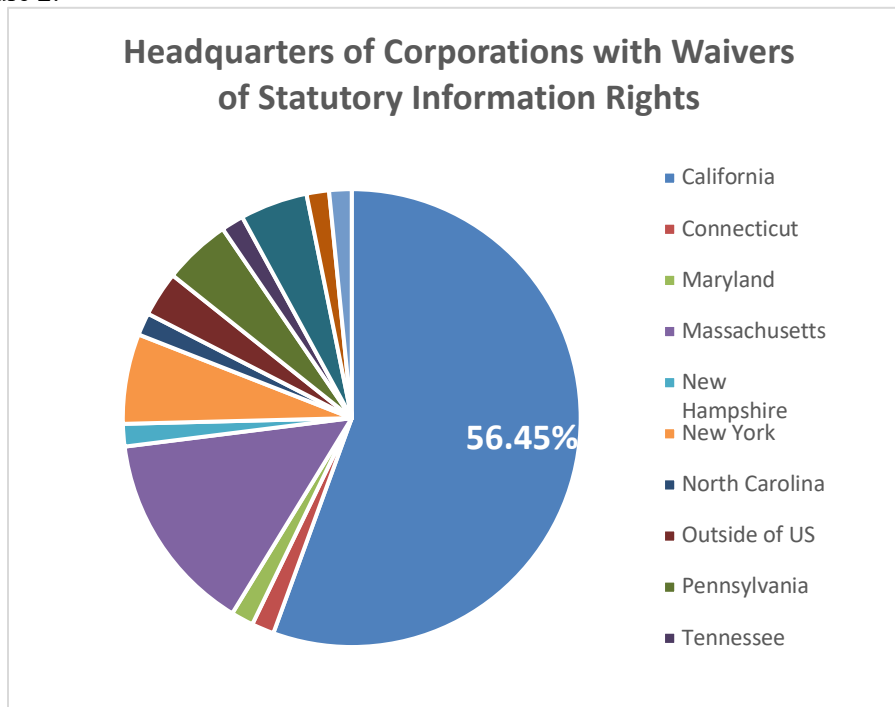

Perhaps parties can state as clearly as possible that they want their clause to (a) be exclusive or non-exclusive; (b) apply or not apply to this specific type of claim—inspection of books and records; (c) apply or not apply to non-signatories; or (d) select specific state courts that have authority to adjudicate these matters.

Figure 2 breaks down the percentages of each corporation that has adopted a waiver by examining the state in which their headquarters is located.²⁶²

Figure 2.

F. NVCA Moves to Standardize Statutory Stockholder Inspection Waivers

Another very important development in this field is an effort by interest groups that represent tech firms to standardize statutory stockholder inspection waivers. Recently, “[b]etween July 28, 2020, and September 1, 2020, the National Venture Capital Association (the ‘NVCA’) released updates to its model legal documents for use in venture capital financing transactions” that incorporated the waiver language in the Investors’ Right Agreement (“IRA”).²⁶³

The purpose of this change is to reduce the potential claims from shareholders involving demands for access to books and records under Section 220 of the DGCL. Some law firms even advise their clients that “[a] Delaware court may hold [the waiver] provision enforceable, given the trend

263. *Venture Capital Investing: New NVCA Models, and New Challenges for Foreign Investors in Early-Stage U.S. Companies*, CLEARY GOTTlieb (Oct. 7, 2020), <https://www.clearygottlieb.com/-/media/files/alert-memos-2020/20201007-venture-capital-investing-new-nvca-models-and-challenges-for—pdf.pdf>.

to enforce private agreements between sophisticated investors.”²⁶⁴ Do they consider the fact that employees are not represented and not accredited to be sophisticated? Perhaps. However, I strongly disagree with this view.

IV. SUGGESTIONS

Delaware courts need to provide more clarity in this area of the law where choice of law issues are relatively likely to come up on a regular basis in the future (stockholder inspection rights)—specifically, with regard to unicorn firms, since eighty-nine percent of them are incorporated in Delaware.

A. Delaware Courts

Delaware courts should not depart from the established common law tradition that enforces mandatory immutable inspection rights. Delaware courts should clarify that it is impermissible to contract out of mandatory stockholder inspection rights. More importantly, Delaware courts should declare that they will continue to allow minority employee stockholders to access the books and records of their companies under Section 220 in order to evaluate their stake in the company.

This does not represent a radical shift in the law but rather a restoration of the understanding that existed long before *Domo* or *JUUL* were litigated. Delaware courts have consistently taken steps to protect minority shareholders. Despite attempts under federal law to strip away employees’ status as shareholders, Delaware should step up and consider the broader role these shareholders play in governance and corporate purpose.

B. Delaware Legislature

The Delaware legislature should not amend its statutes to enable corporations to waive the important stockholder inspection right via private ordering. Section 220 affords protection to minority stockholders from the oppressive behavior of the majority by allowing minority stockholders to gain access to their company’s books and records.

Unfortunately, DGCL Section 220 does not offer such protections to stock option holders. Therefore, this Article further calls on the Delaware legislature to amend its statutes in order to enable stock option holders, in limited situations, to access their companies’ books and records under DGCL

264. Cameron R. Kates et al., *Modeling the Market: The National Venture Capital Association Revises Its Model Documents*, TROUTMAN PEPPER (Sept. 16, 2020), <https://www.troutman.com/insights/modeling-the-market-the-national-venture-capital-association-revises-its-model-documents.html>.

Section 220. Such stock option holder inspection rights can be drafted to clearly state that they only include certain categories, such as employees; that information only be provided at a reasonable time and in connection with a proper purpose; and that a limited type of information be provided to value the equity.

C. Practitioners Everywhere

Practitioners who are advising tech companies should innovate by helping their clients to find ways to provide information to their employees while protecting the firm's intellectual property. A departure from the traditional stock option model will not benefit the firm.

Practitioners are innovating because they want to protect the firm from a rise in potential lawsuits from employees, which is understandable. But they need to fix the problem, not create a bigger one. This waiver does not solve the problem but makes it worse. When employees complain about their company in public (on online platforms) and initiate lawsuits against the company, it raises costs. The firm has to monitor, retain, and engage labor, especially when there is a short supply and fierce competition in technology markets.

The problem is about asymmetry of information. To mitigate it, attorneys can require that the firm disclose the following information to employees. First, in addition to the Stock Option Purchase Agreement and the Plan, the attorney can produce a schedule with the amount of capital that was raised by the company until that point. The schedule would include a list of investors that received liquidation preferences and founders who were granted super-voting common stock.

Second, disclose how much debt has accumulated (including debt evidenced by convertible or SAFE notes).²⁶⁵ Third, if the firm allows employees to trade on secondary platforms, it will also provide appropriate disclosure, including any restrictions on resale, to make sure that employees understand and comply with the applicable securities regulations. If the firm does not allow employees to trade on secondary platforms, then it can facilitate private secondary market sales, or stock buybacks.²⁶⁶

Fourth, disclosure would include information on the compensation of the management team, information concerning current and future stock and debt issuances, a list of investors holding more than a specified percentage

266. See Ric Marshall et al., *Taking Stock: Share Buybacks and Shareholder Value*, HARV. L. SCH. F. CORP. GOVERNANCE (Aug. 19, 2018), <https://corpgov.law.harvard.edu/2018/08/19/taking-stock-share-buybacks-and-shareholder-value/> (finding "no compelling evidence of a negative impact from share buybacks on long-term value creation for investors overall").

(perhaps fifteen percent) of the outstanding stock (including their liquidation preferences and conversion rights), and a quarterly estimated fair market value of the stock. Finally, a request that unicorns be audited by an independent auditing firm. The employees should have access to and be entitled to rely on these reports.²⁶⁷

Employers may not have much choice going forward. According to Barzuza, Curtis, and Webber, Millennial employees, consumers, and investors are more willing to demand what they call “radical transparency.”²⁶⁸ This calls for information far exceeding the minimum requirements of securities laws and public companies are responding rapidly in an attempt to build loyalty amongst this generation and Gen Z, their younger counterparts.²⁶⁹ Over the next two decades, these two generations will represent the majority of employees, investors, and voters.²⁷⁰ It is essential for unicorns to adapt as well to avoid potential backlash and to create the loyalty they will need to maintain their human capital pool.²⁷¹

These disclosures can produce increasingly equitable and sustainable employee participation in unicorn companies. Although these disclosures are equitable for employees—and can show that investing in the company is sustainable—disclosures are a nightmare for unicorn management teams. There is a need for innovation with regard to disclosure practices. Time will tell whether Section 220 will alleviate the problem of golden handcuffs and the ensuing constraint on employee mobility.²⁷²

CONCLUSION

Unicorns stay private longer for various reasons, but in large part, to avoid public disclosures that could reveal their true financial conditions and fair market value, including to their own employees. Unicorns are notorious for their exaggerated valuations. Employees are not privy to confidential information, including financial statements, shareholder lists, and other material non-public documents. Unicorns are likely to refuse access to employees seeking such information.

267. For alternative suggestions on disclosure, see generally Aran, *supra* note 81.

268. See Michael Barzuza et al., *The Millennial Corporation: Strong Stakeholders, Weak Managers* (Apr. 12, 2022) (unpublished manuscript), https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3918443.

271. See Alon-Beck, *supra* note 71; Anat Alon-Beck et al., *No More Old Boys' Club: Institutional Investors' Fiduciary Duty to Advance Board Gender Diversity*, 55 U.C. DAVIS L. REV. 445, 455–56 (2021).

272. See *supra* Part III.

Unicorn firms' founders, investors, and their lawyers have systematically abused equity award information asymmetry to their personal benefit. They use *ex ante* waivers of inspection rights or *ex post* non-disclosure agreements in an effort to limit some shareholder inspection rights via private ordering. Unicorn firms do not provide their minority common stockholders and stock option holders—specifically, their employees—with information on their stake in the company, which could improve efficiency and reduce information asymmetries. Unicorn employees do not have access to financial reports and, in many cases, are denied access to such reports.

This Article demonstrates that following a recent Delaware case, *Biederman v. Domo*, unicorns adopted a new, pervasive practice that compels their employees to waive inspection. Relying on a hand-collected data set consisting of the SEC's public filings, I found that unicorn firms require their employees to waive their inspection rights under DGCL Section 220 as a condition to receiving stock options from the company. Employees sign a waiver clause titled "Waiver of Statutory Information Rights," in which they waive their inspection rights of the following materials: company stock ledger, a list of its stockholders, other books and records, and the books and records of subsidiaries of the company. The waiver remains in effect until the first sale of the company's common stock to the public occurs.

Unicorn employees are turning to the courts to compel their companies to open up their books and records and to disclose financial information. Employees who are stock option holders, but not yet stockholders, do not have a right to access such information under Delaware law. To have standing in court, the employee must first exercise their options and become a stockholder of record. This Article advocates for reform. Both minority stockholders and stock option holders should be entitled to information so they can make informed investment decisions, such as deciding whether to exercise their options or to let them expire overnight.

This Article also presents evidence that U.S. unicorn firms prefer to incorporate in Delaware. Relying on hand-collected data, I found that eighty-nine percent of the unicorns in the United States are incorporated in Delaware.²⁷³ Therefore, this Article calls on the Delaware courts and legislature to not allow unicorns to modify or eliminate the mandatory inspection rights expressly set forth in the DGCL. Delaware law is and should continue to serve as a valuable tool for minority stockholders and stock option holders (employees) who are questioning the value of their shares. Delaware courts and legislators' actions on, and resolution of, this

273. See Alon-Beck, *supra* note 261.

important issue will have tremendous influence on corporate law, litigation, and practice.

APPENDIX

Table 1: Unicorn Firms Incorporated in Delaware with Public Record of Statutory Waiver of Information

Corporation	Date of Incorporation	Date of Waiver	Valuation of Firm (Billions)
JUUL Labs	3/12/2007		\$50.0
DoorDash	5/21/2013	11/13/2020	12.6
SoFi	4/26/2011		4.5
